AUTOMATIC WORKOUT TRACKING

Your gym's cameras, now your training log.

Live demo · tryspottr.app/demo

Felix Müller-Gliemann · Martin · Gard, co-founders
info@tryspottr.app · Pre-seed, October 2026

[TODO: full names of Martin and Gard]

spottr

THE CAMERAS ARE ROLLING. NOBODY'S COUNTING.

MEMBERS

Nobody types between sets.

● FOUNDER OBSERVATION

GYMS

No data on how their floor is used, and a third of members leave each year.

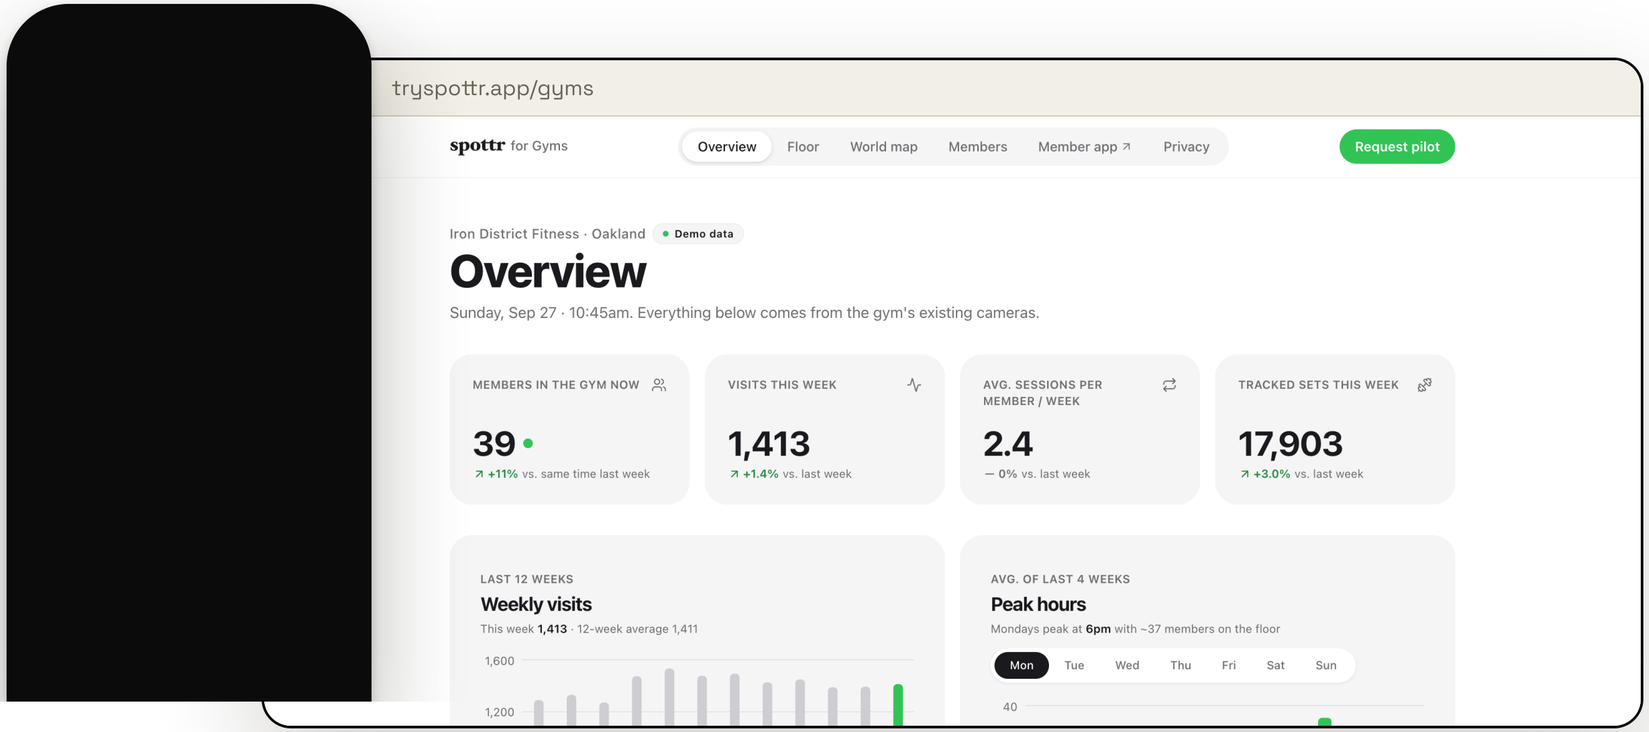

[TODO: one verbatim, approved quote from a gym operator, with name and gym (HC1)]

Gyms: average annual retention 66.4% (HFA 2025 Benchmarking, 175 operators, data year 2024). Members: founder observations, not a survey.

Solution · the gym pays, members use it

MEMBERS GET EVERY SET LOGGED. GYMS SEE THEIR FLOOR, HOUR BY HOUR.

- **BUILT** Body pose, not faces. Detected bystanders are pixelated in the replay.
- **REAL** The phone shows the pipeline's output on a recorded dip clip: 10 reps, muscles worked.
- **DEMO** The dashboard shows a simulated gym.

Member app: recorded dip clip, lifter's consent confirmed. Gym dashboards are simulated today. Live: tryspottr.app/demo and /gyms.

How it works

NOTHING TO WEAR. NOTHING TO TYPE. NO NEW CAMERAS.

01

THE CAMERAS ALREADY THERE

Spottr reads the gym's existing IP cameras.

→

02

ONE SPOTTR BOX

Plugs into the gym's network. Counts every set on site.

→

03

EVERY SET LOGGED

Members see their workout. The gym sees its floor.

● BUILT: COUNTING ON RECORDED FOOTAGE

○ IN DEVELOPMENT: LIVE CAMERA FEED AND THE BOX

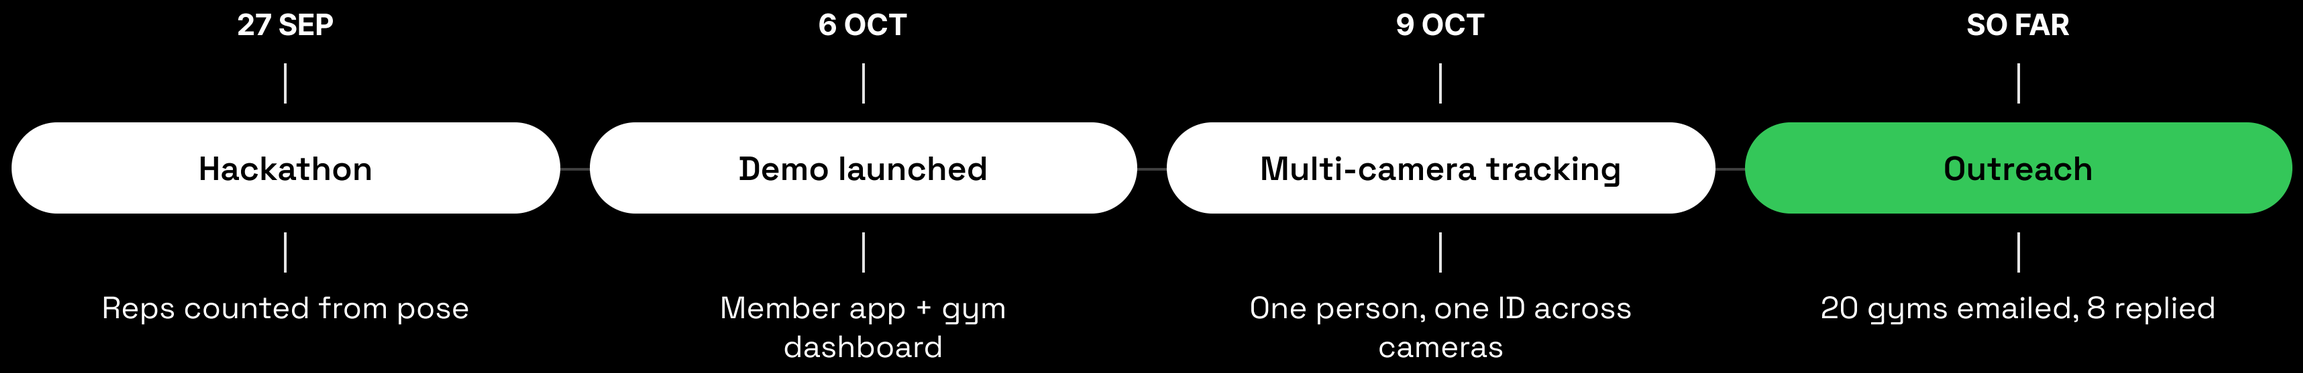

No rule is written per exercise; counting is tested on squats and dips. Pipeline and multi-camera tracking: appendix A2–A5.

Progress

40% OF THE GYMS WE COLD-EMAILED WROTE BACK.

FOUNDER-REPORTED 8 of 20 replied. A multi-location San Francisco chain is in pilot talks.

[TODO (OC1): with a signed pilot, LOI or corporate email, add "An [N]-location SF chain starts on [date]" + logo with permission]

Outreach: founder-reported; no pilot agreed, no LOI, no revenue yet. Dates: git history of this repo, 2026. Hackathon: Berkeley × Google DeepMind, 3-hour sprint.

Why now

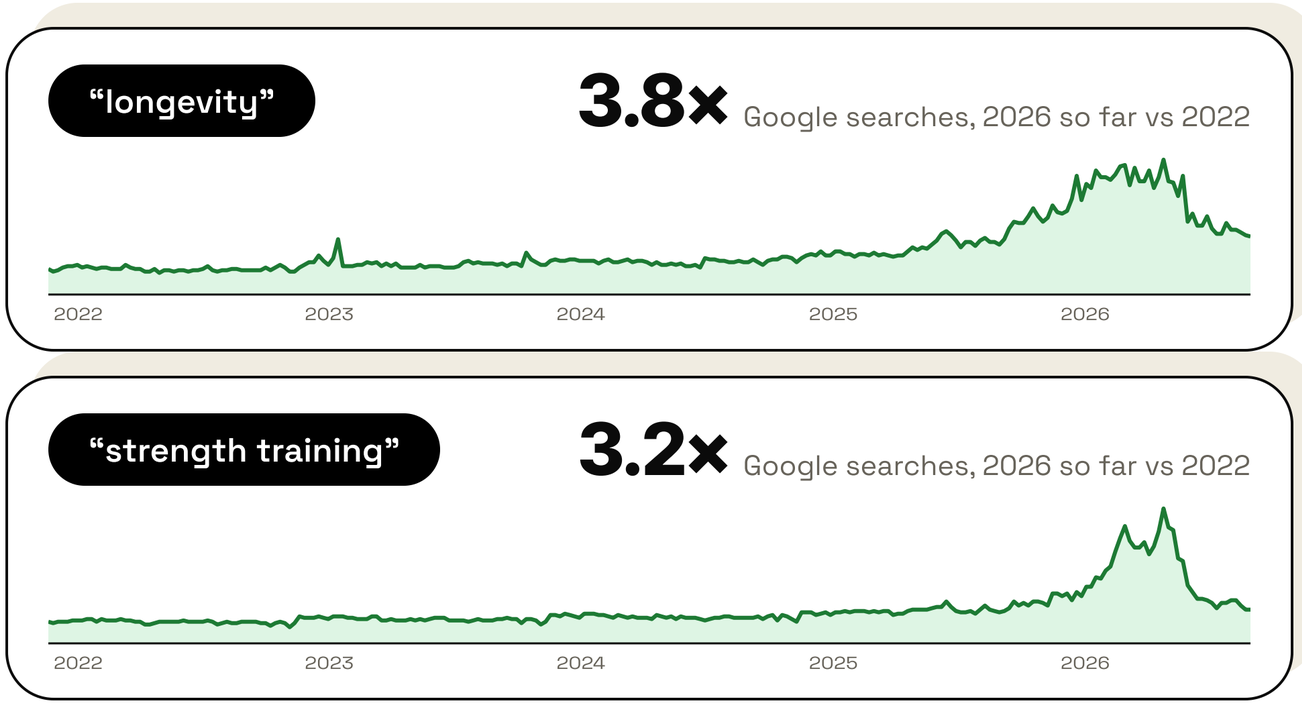

US GYMS JUST HAD THEIR BIGGEST YEAR EVER.

81M Americans belonged to a gym in 2025. An all-time high, up 5.2%.

7B Gym visits in 2025, above the pre-pandemic peak.

46% of US adults own a wearable. It was 13% in 2015.

280× cheaper AI in under two years. Watching every set is now affordable.

HFA 2026 US Health & Fitness Consumer Report (Apr 2026) · Rock Health 2025 Consumer Adoption Survey (n = 8,000) · Google Trends, US web search, weekly, yearly averages to 11 Oct 2026 · Stanford AI Index 2025: GPT-3.5-level AI, Nov 2022 to Oct 2024.

Competition

APPS NEED TYPING. MACHINES TRACK ONLY THEMSELVES.

Positions are our reading of public material, not measured (VPixel: Agmis, Health Club Management 2019; Exersight: exersight.com). Details: appendix A8.

Market

A $3.8 BILLION MARKET.

$3.8B — **WORLDWIDE** — ~210,000 gyms and fitness clubs — TAM

$498M — **UNITED STATES** — ~27,600 clubs with usable cameras — SAM

$62M — **CALIFORNIA** — ~3,400 clubs with usable cameras — State

$1.9M — **BAY AREA CHAINS** — ~104 locations — SOM

- $18K PER LOCATION PER YEAR · TARGET PRICE, UNTESTED
- FROM THE US DOWN: 50% OF CLUBS HAVE USABLE CAMERAS · ASSUMED

Bars not to scale. Worldwide: "nearly 210,000" facilities (IHRSA 2020 Global Report, 2019 data, latest global total). US: 55,281 clubs (HFA). California: its 2019 share of US clubs (12.4%) applied to 55,281. Bay Area: v1 research. Math: appendix A6.

Business model

$18K A YEAR PER GYM. 80%+ MARGIN.

GYMS PAY

$1,500

per location per month, hardware included

TARGET PRICE · UNTESTED

MEMBERS

Free logging. Paid AI coach later.

81–83%

gross margin per location

17–19%

cost to serve. A bigger floor needs a second box.

ILLUSTRATIVE · COSTS ASSUMED

Per location per month: one box (400-member gym) 83.1%, two boxes 81.2% (CLAIMS.md). Cost lines and break-even: appendix A7. No customer has paid yet. [TODO: package tiers]

Team

FROM HACKATHON TO MULTI-CAMERA TRACKING IN 12 DAYS.

[TODO: headshot → assets/team/felix.jpg]

Felix Müller-Gliemann — CEO

Business, LMU Munich; UC Berkeley Haas exchange. Ex-Founders Associate, AI-native M&A startup. Built the multi-camera tracking.

[TODO: headshot → assets/team/martin.jpg]

Martin [surname] — CTO

MSc Entrepreneurship. Built the vision pipeline (pose, tracking, rep counting) and the member app.

[TODO: headshot → assets/team/gard.jpg]

Gard [surname] — CPO (TBC)

MSc Robotics. [TODO: what Gard built or owns]

All three full-time. Hackathon 27 Sep, multi-camera tracking 9 Oct (git history). [TODO: surnames, titles, institutions, how long you've known each other, Gal, LinkedIn]

The ask

$300K TO GO LIVE IN PAYING GYMS.

Outreach

Founder-led sales to Bay Area chains. Chain #1 becomes the case study.

Automation

Automate install and calibration, so a new location goes live fast.

Mac minis

One on-site box per gym for the first 5–15 locations (~$7–36K).

PLAN, NOT COMMITMENTS

[TODO: confirm months after November, use-of-funds split, instrument and cap]

OCT 2026	END OF NOV 2026	JAN 2027	APR 2027	OCT 2027
$300K closed	First paying gym	Chain #1 fully live	5–15 paying locations	Seed round

12 months of runway from the close. Hardware: 5 × $1,489 to 15 × $2,388 per location (derived, CLAIMS.md). Today the product runs on recorded footage; the live feed and the box are in development.

AUTOMATIC WORKOUT TRACKING

A6 Market math →

A7 Unit economics →

A8 Competitors →

A9 Go-to-market →

A10 Open questions →

A11 Product →

A1 · Privacy

We track body pose, not faces. Here is what the build does today.

AVAILABLE TODAY

- TODAY **No face recognition.** Sets and reps come from body keypoints over time.
- TODAY **Bystanders pixelated** head to toe in the member replay (when detected).
- TODAY **Blurred snapshots only:** the model gets one small image per set, lifter's face pixelated, others fully pixelated.
- TODAY **Operators see aggregates:** counts, trends, zones. No photos or video.
- TODAY **Recaps generated from text** (exercise names, reps), never video.

IN DEVELOPMENT

- BUILDING All processing on the Spottr box; goal: raw video never leaves the gym.
- BUILDING Member opt-in and opt-out.
- BUILDING Retention windows with automatic deletion.
- BUILDING Self-serve export and deletion.

KNOWN LIMIT

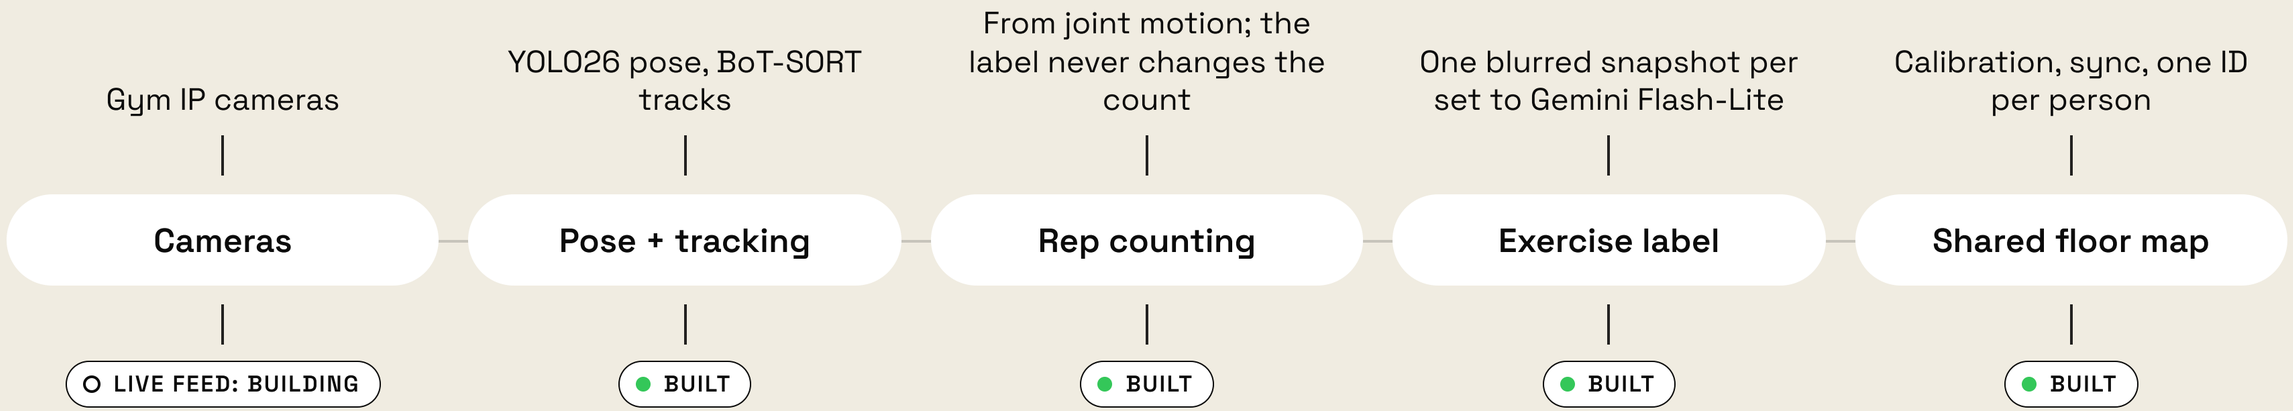

Blur covers only people the pose model detects; the replay blurs while drawing, the video file itself is not blurred.

`[TODO: GDPR / CCPA framework and consent flow, after legal review]`

Mirrors the /gyms/privacy page ("Available today" vs "In development"), which lists only what the current build does.

A2 · Technology

From camera stream to logged set, with no per-exercise rules.

TESTED ON

Recorded gym clips (squat, dip, crowd). Multi-camera tracking: two phones filmed in a lounge, not a gym.

DESIGNED FOR

Gym IP cameras and one on-site box (Mac mini class) per gym; only blurred snapshots and workout data leave the building.

BUILDING

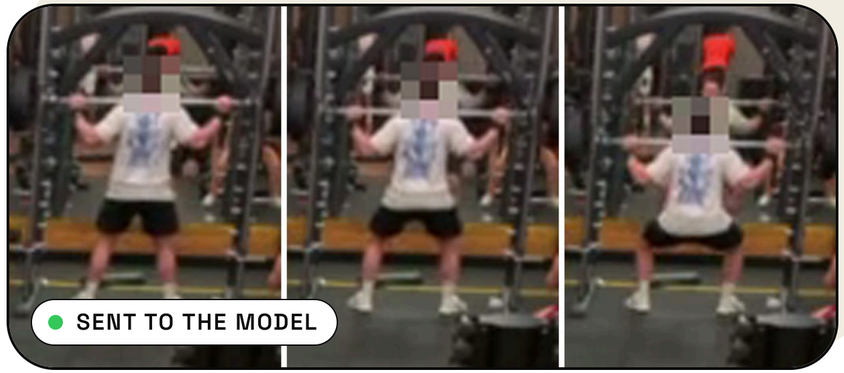

RUNS ON

Python vision pipeline · FastAPI world service · React/TypeScript member app and gym dashboard.

Rep counting is exercise-agnostic by design (backend/vision/analyze.py) and tested on squats and dips. Multi-camera tracking: world-service/docs/REPORT.md.

A3 · Exercise labels

One blurred image per set names the exercise. No rule written per exercise.

→

Squat

smith machine
confidence 0.95

→

Dip

bodyweight
confidence 0.95

TESTED ON SQUATS AND DIPS

Real inputs and outputs from recorded clips (session.json, Gemini Flash-Lite); faces are pixelated before the call. Cost: est. $0.001–0.005 per set from list prices, token counts not yet measured. Pose: 13–14 fps on recorded clips (team-stated, not a benchmark).

A4 · What we have measured

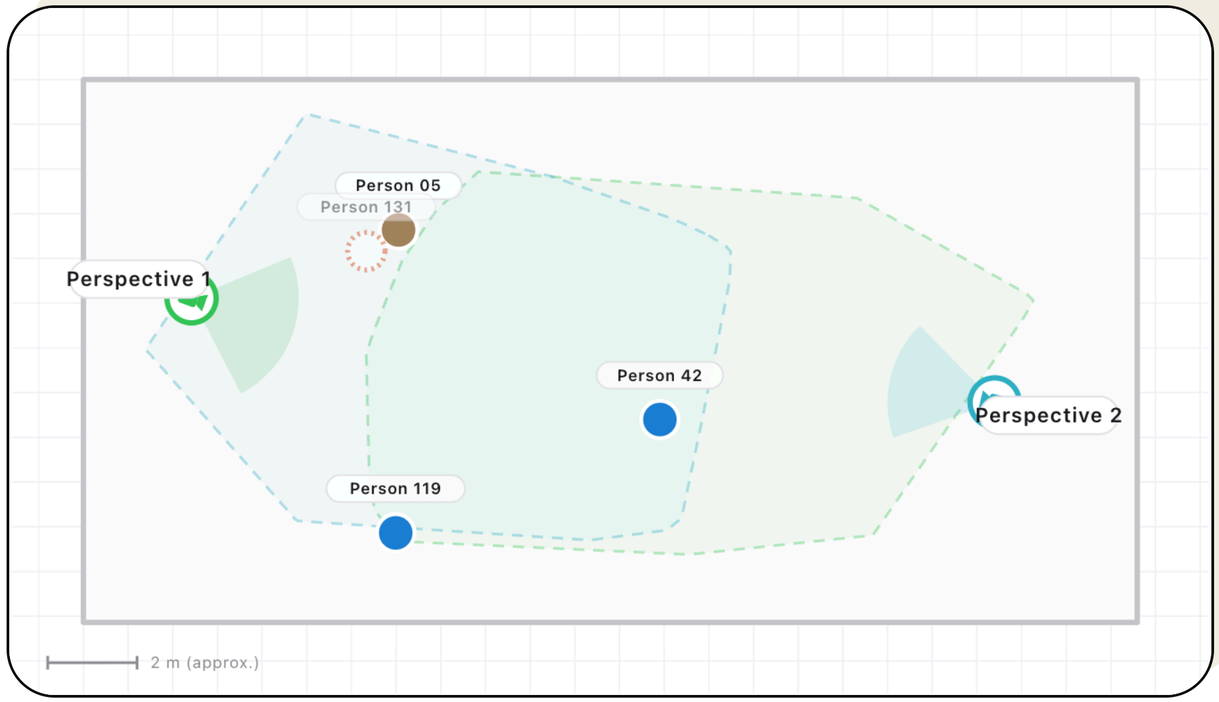

Measured: identity tracking across two cameras. Not yet: rep-count accuracy at scale.

TEST	RESULT	SCOPE
Two-camera identity	IDF1 0.949 · 0 false merges	Held-out 60 s, 10 people, single reviewer
Cross-camera linking	Recall 0.70 · 21% "needs confirmation" · 11 ID switches	Same segment
Floor position	Cameras agree within 0.26 m (median), 0.72 m (p90)	Same segment; two phones in a lounge, not a gym
Rep counting	5 squats and 10 dips counted · 0 false sets on a crowd clip	3 recorded clips; team-stated, not a benchmark
Speed	13–14 fps pose + tracking	Recorded clips, team-stated
Synthetic tests	17/17 pipeline · 10/10 world service	Synthetic skeletons and scenes, not video
Next	Labelled rep-count eval: `[N] sets × [M] exercises, % reps exact`	Before YC; same review method as the floor map

Multi-camera tracking: world-service/docs/REPORT.md §3 (held-out segment 420–480 s). Pipeline: CLAIMS.md, slide-7 rows; fps from session.json (13.4 and 14.2).

A5 · Multi-camera tracking

Two cameras, one shared map: every person keeps one ID across views.

0.95 IDF1 on a held-out minute

0 false merges (two people as one)

0.70 cross-camera recall; the rest shows as "needs confirmation"

REAL OUTPUT two recorded phones in a lounge, not a gym

world-service/docs/REPORT.md: 10 people, 60 s held-out segment, single reviewer. Live gym cameras not tested yet.

A6 · Market math

Locations × price, with camera share applied from the US down.

LAYER	LOCATIONS	IN SCOPE	PRICE / YEAR	SIZE	SOURCE
Worldwide (TAM)	~210,000	all	$18,000	$3.8B	IHRSA 2020 Global Report (2019 data)
United States (SAM)	55,281	~27,600 (50%)	$18,000	$498M	HFA
California	~6,850 (est.)	~3,400 (50%)	$18,000	$62M	12.4% of US clubs in 2019 (5,123 of 41,370) × 55,281
Bay Area chains (SOM)	~208 (implied)	~104 (50%)	$18,000	$1.9M	v1 research, assumed
US chains	7,825	~3,900 (50%)	$18,000	$70M	Vendor counts, ±5%

Camera share is assumed, not measured: 30–70% moves the US to $299–697M. The worldwide row counts every club, since any club can add cameras.

Price is the founders' target, not yet tested with a customer. The worldwide count is from 2019; facilities grew about 4% from 2023 to 2024 (HFA 2025 Global Report).

Sources: IHRSA/HFA press releases (healthandfitness.org); Statista "Number of health clubs in the U.S. by state 2019"; CLAIMS.md slide 8.

A7 · Unit economics

At $1,500 a month, the cost to serve one location is $253–282.

PER LOCATION PER MONTH	ONE BOX	TWO BOXES
Gemini labels (2027 list price)	$99.00	$99.00
Support	$50.00	$50.00
Payments (2.9%)	$43.50	$43.50
Hardware (over 36 months)	$41.40	$66.30
Hosting	$15.00	$15.00
Device management	$4.00	$8.00
Cost · gross margin	$252.90 · 83.1%	$281.80 · 81.2%

BREAK-EVEN FOR THE GYM

Pays for itself if a location keeps **[N]** members it would have lost. N = $1,500 ÷ monthly dues.

`[TODO: dues from the chain or a public price list]`

WHAT GYMS PAY FOR SOFTWARE TODAY

Mindbody Starter $79 per location per month; Glofox €220–515 per month. Camera vendors: Flock $1,500 per camera per year (2018); Density $45 per sensor per month (2016). The chain pilot tests our price first.

CLAIMS.md slide 9 (400-member gym; cost lines are assumptions; hardware $1,489 one box, $2,388 two boxes). Comparators: deck/benchmark/04_analog_decks.md.

A8 · Competitors

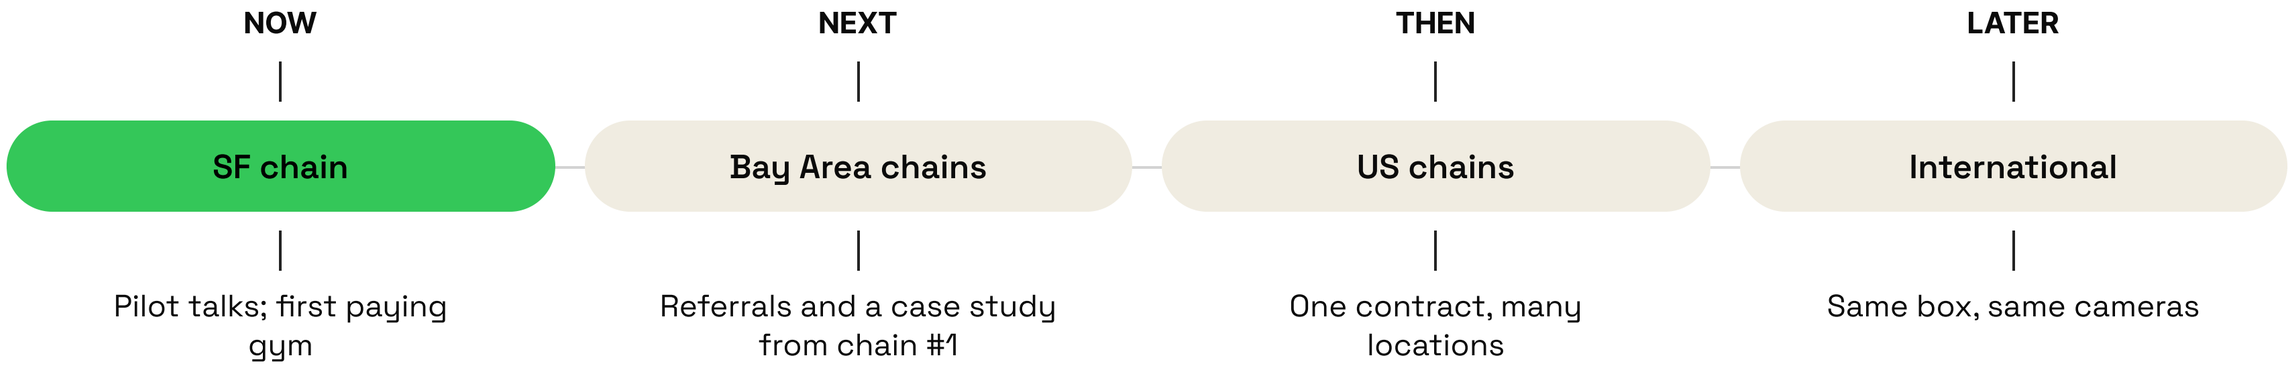

Automatic trackers bring their own hardware or show no named gyms. Spottr is designed for the cameras a gym already owns.

PLAYER	WHAT IT IS	TRACKING	HARDWARE	WHAT IT LACKS VS SPOTTR
VPixel (Agmis)	Coaching and retention from gym cameras (since 2019)	Automatic	Existing cameras	No named gyms or prices in its public material
Exersight	Camera-based form feedback, Germany (2025)	Automatic	Own cameras	New cameras per studio; one development site
EGYM, Technogym	Smart strength machines, connected equipment	Automatic	Own machines	Only their own machines
GroeFit	Occupancy and churn analytics	No set logging	Software	No sets and reps
Whoop	Wrist wearable	Strain-based	Wearable	Members wear it; strain, not sets
Hevy, Gravit	Workout logging apps	Manual	Phone	Members type every set
Spottr	Gym cameras to workout log and floor data	Automatic	Existing cameras + one box	`[TODO: verified edge vs VPixel]`

Our reading of public material (deck/benchmark/04_analog_decks.md; CLAIMS.md slide 10). Incumbents could add camera tracking.

A9 · Go-to-market

Chains first: one contract, many locations.

GYM CHANNEL

Direct founder outreach to chain operators: 20 gyms emailed, 8 replied (founder-reported).

MEMBER CHANNEL

Every partner gym brings its members in free. Premium converts from there (hypothesis).

[TODO: sales cycle length, pilot-to-paid terms, onboarding playbook per location]

A10 · Open questions

Three things to prove next: it works live, a chain pays, members stay.

Works live

Real gym cameras, several streams on one box. Needed for the first paying gym.

A chain pays

First paying gym by end of November; then chain #1 at a price it has seen.

Members stay

No retention evidence yet. The paying gyms measure it.

OPEN: WHO IS WHO

Linking a person on camera to a member account. Options: QR check-in at the door · Refit ID · face recognition at entry **(needs legal review; today we do no face recognition)**.

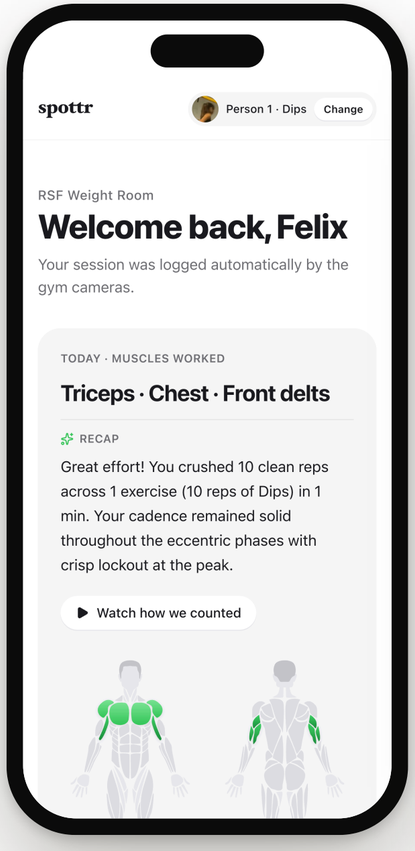

ROADMAP

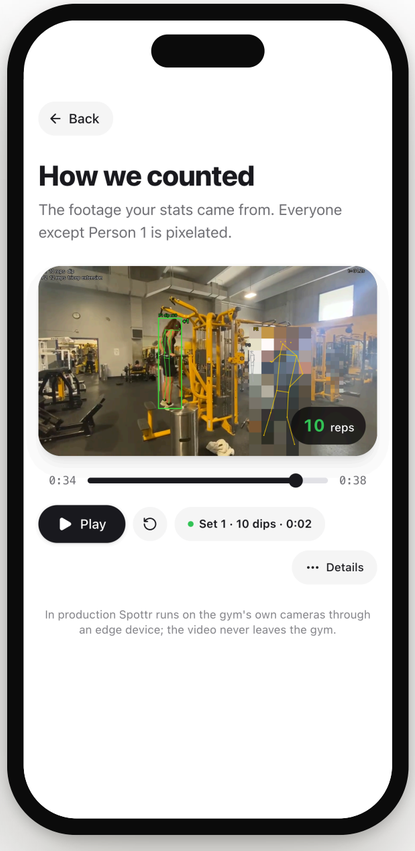

Members: AI coach, PRs, leaderboards. Gyms: live floor map, idle equipment, churn signals.

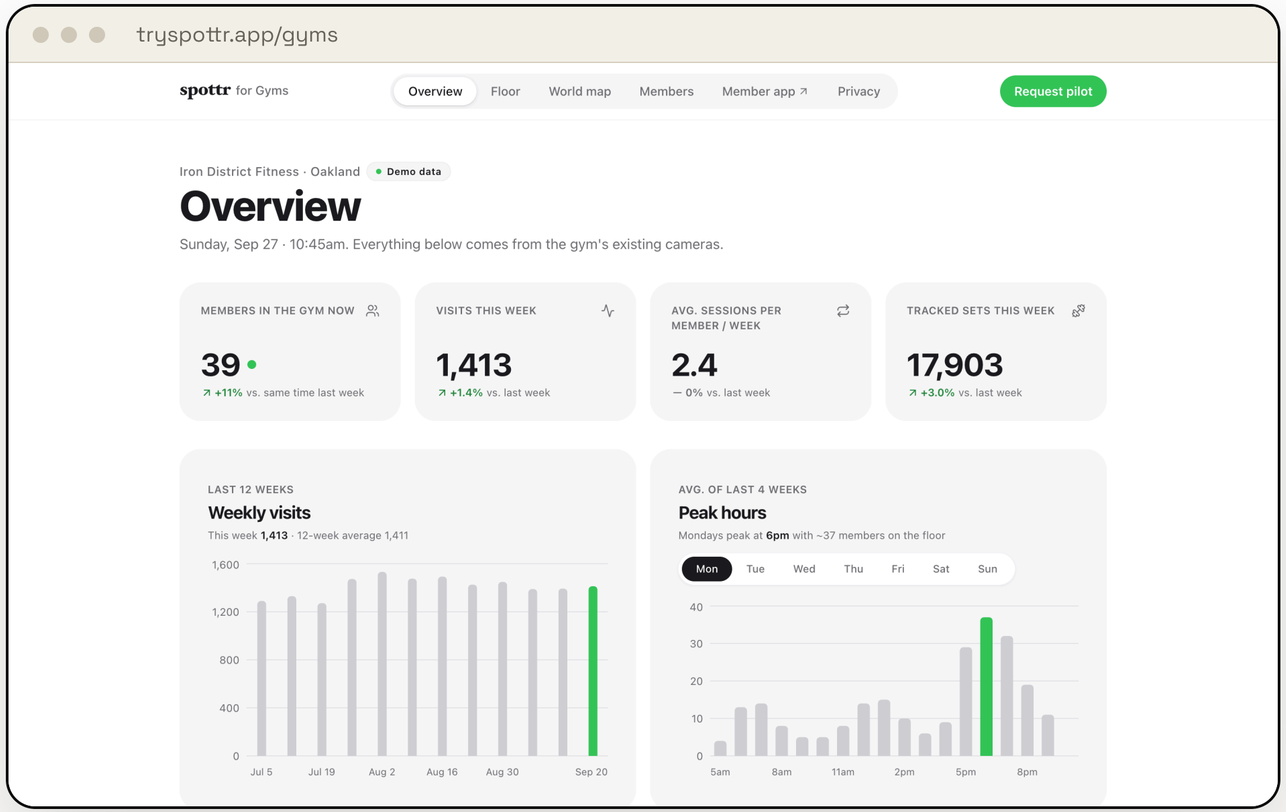

`[TODO: success thresholds the founders commit to: accuracy %, active-member share, pilot-to-paid]`

A11 · Product

The product today: member app and gym dashboard.

Member app: recorded dip clip with the pipeline's real output (replay pixelates everyone except the lifter). Gym dashboard: simulated demo gym. Live: tryspottr.app/demo and tryspottr.app/gyms.
