spottr

Spottr turns the cameras a gym already has into an automatic workout log.

Automatic workout tracking from existing gym cameras.

Felix Müller-Gliemann, Martin, Gard · info@tryspottr.app

[TODO: full names of Martin and Gard]

PROBLEM

Gyms lose a third of members yearly; engaged ones stay longer.

66.4%

annual retention

23 vs 16

months: engaged vs others

2.1 → 1.5

weekly visits, 2019-24

Gym owner, paraphrased: the area overview was especially helpful.

HFA 2025 Benchmarking (175 operators, data year 2024); Les Mills 2025 (2.6M member journeys, correlational: 23 vs 16 months is seven months longer). HFA 2026 reports a decade-low churn for 2025. Owner feedback is one conversation, a paraphrase, not a quote (07_founder_input.md §2).

WHY NOW

Gym membership is at a record high, and the cost of a given AI capability keeps falling.

81M

US members 2025, record, +5.2%

~10x cheaper a year for a fixed capability (language models, not vision)

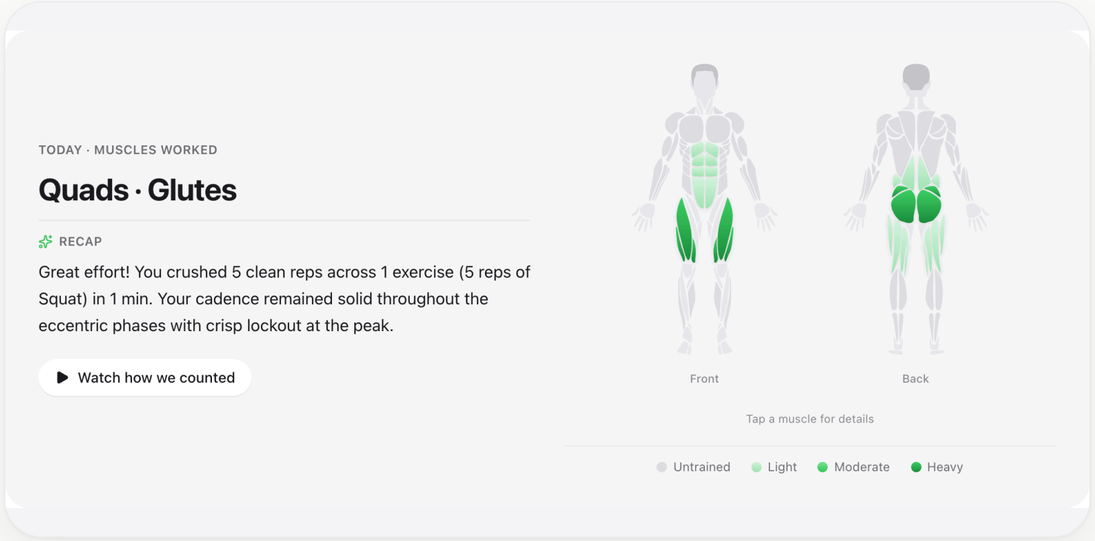

[TODO: share of mid-tier gyms with IP cameras covering the weight floor and RTSP access, add only after first site visits]

HFA 81M release (9 Apr 2026). AI cost: a16z "LLMflation" (2024) measures language-model benchmarks; Epoch AI finds 9-900x a year by task. Frontier and Flash prices have risen and step up again on 2027-01-01, so Spottr's own cost line is not falling (08_web_update.md §1.8-1.11).

SOLUTION · THE GYM PAYS, MEMBERS USE IT

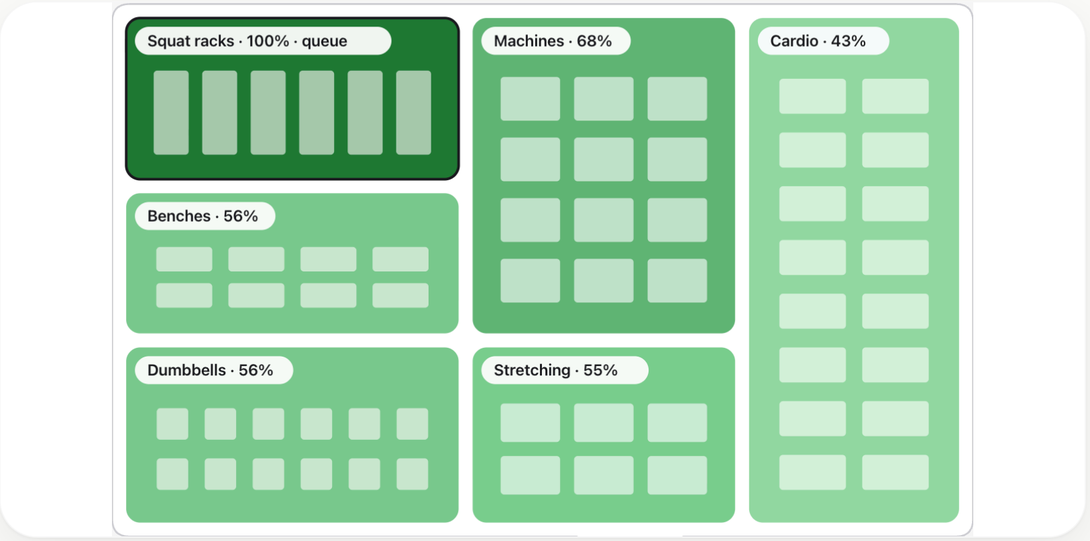

Spottr is built to log sets from a gym's existing cameras, with nothing for members to wear or type.

FOR MEMBERS

Demo data

FOR GYMS: ZONE OVERVIEW

Demo data

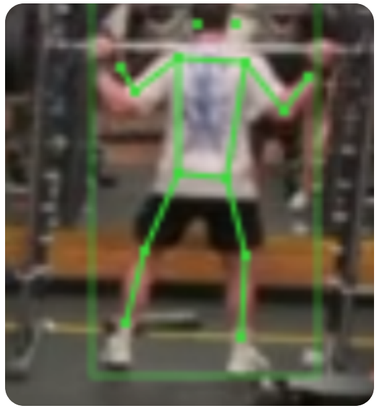

Open: how a person on camera is linked to a member account (check-in, app QR or re-ID) is not solved yet.

context.md §What Spottr is; 07_founder_input.md §4. The gym-side dashboard is simulated today.

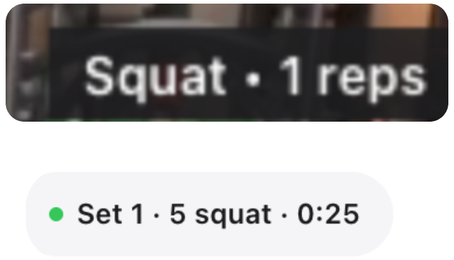

HOW IT WORKS

Pose tracking counts reps without per-exercise rules; tested on squats and dips only.

Pose tracking

Rep counting

One blurred snapshot per set names the exercise

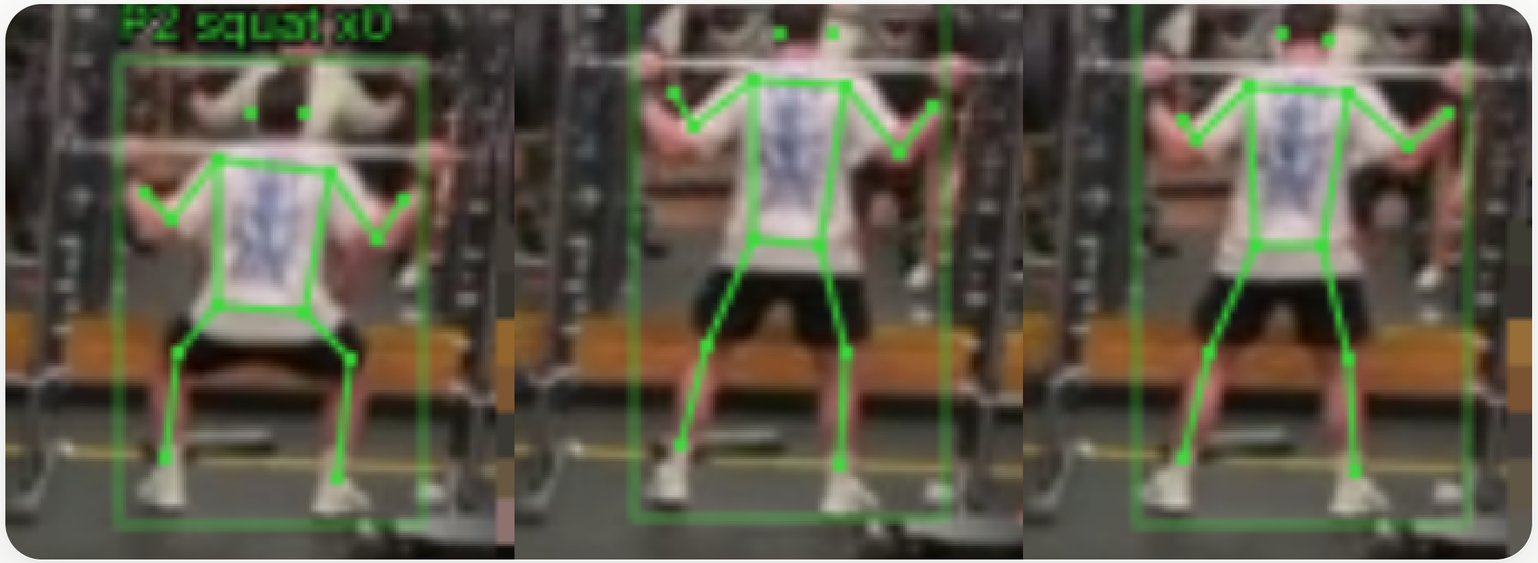

Real pipeline output

Replay pixelates detected bystanders. On-site processing is the target.

Step 2 counts reps from joint motion; the exercise label never changes the count (01_product.md §3). Not every person is guaranteed to be detected, so undetected people are not blurred. Today's Gemini snapshot is one blurred composite per set; processing on a Mac mini in the gym is the target, not deployed (01_product.md §2-§4; Privacy page).

PRODUCT

The replay shows the real pipeline: a skeleton overlay on a recorded squat.

Real pipeline output

REAL

Recorded clip; 5 squats counted (team-stated).

SIMULATED

Operator dashboard, most member tabs.

01_product.md §1, §3, §4 (maturity table); 00_summary.md §2 row 11. Cropped to the lifter; other people in the replay are pixelated when detected. The lifters' consent to show the clips is confirmed by the founders (07_founder_input.md §5).

WHERE WE ARE

Our core runs on recorded clips, not yet a live gym camera.

BUILT

17/17 synthetic tests

OUTREACH, FOUNDER-REPORTED

20 gyms emailed, 8 replied

1 chain in pilot talks, none agreed

NOT YET

Live cameras, LOIs, revenue

[TODO: named VCs or ex-YC founders who gave positive feedback, only with their permission]

Built in a 3-hour hackathon sprint (Berkeley x Google DeepMind, 2026-09-27; no placement). 5 squats, 10 dips counted; 0 false sets on a crowd clip; 13-14 fps (team-stated, 3 clips). The chain is with its corporate team; the location's GM was positive. No pilot agreed, no LOI.

MARKET · CHAINS FIRST

Our chain SAM is about $141M a year, $70M camera-suitable (derived).

$141M · $70M	**SAM** US chains: all · camera-suitable
$995M · $2.2B	**TAM** all clubs: US · US + Europe
$1.9M	**Assumed** Bay Area chain slice

Derived at $1,500/location/month · 50% camera suitability assumed

[TODO: validate chain location counts and camera coverage with the chain in talks]

$18,000 per location a year (08_web_update.md §3). TAM counts all 55,281 US clubs and 67,515 European clubs, any type; the definitions differ. SAM: 7,825 chain locations (vendor counts, about +/-5%). Path: Bay Area, US, international; freemium for members.

BUSINESS MODEL

At a $1,500 target price, derived margins would be about 80% or more; the price is untested.

83.1%
400-member gym, one box

81.2%
two boxes

3.8x
our earlier $399 price; software comparators $75-999

Illustrative, price untested; no customer has paid

[TODO: validate $1,500 per location per month with the chain in talks]

Derived from the 05_business_model.md §4.2 monthly cost lines (hardware over 36 months, Gemini Flash at the 2027 price) with payments at 2.9% of $1,500: costs $252.9 (one box), $281.8 (two). Hardware $1,489-2,388 per gym, carried by Spottr. Comparators: 08_web_update.md §3.1.

COMPETITION

Rivals need own hardware or wearables; Spottr is designed for existing cameras.

SPOTTR

Existing cameras (target; tested on recorded clips)
Automatic sets and reps
Bystander blurring

04_competition.md §1, §4, §6, §8. Positions are our reading, not measured. GroeFit offers occupancy and churn analytics, not set tracking. The area overview is demo data; live camera ingestion is not built. Incumbents could add camera tracking later; the YC directory is not yet scanned (04_competition.md §9).

TEAM

Three full-time founders with business, entrepreneurship and robotics backgrounds.

Felix Müller-Gliemann

CEO

LMU Munich, exchange at UC Berkeley Haas

Martin

CTO

MSc Entrepreneurship

Gard

CPO title tbc

MSc Robotics

[TODO: full names of Martin and Gard, photos]

07_founder_input.md §11; context.md §Team (all three full-time). Felix: BSc Business Administration, previously Founders Associate at an AI-native M&A startup. Not yet incorporated.

THE ASK

We are raising a $300k pre-seed to put three full-time founders on real gym cameras.

OCT 2026	JAN 2027	APR 2027	JUL 2027	OCT 2027
Target close	Mac mini benchmark	First live install	5-15 pilots	Accuracy, retention read-out

Plan, not commitments

[TODO: instrument and cap; use-of-funds percentages]

Raise closes end of October 2026, then 12 months (07_founder_input.md §10); month labels are our plan. Use of funds: runway, hardware, pilots, product. Hardware for 5-15 pilots about $7k-36k (derived: 5 x $1,489 to 15 x $2,388). Next: a seed round after pilots.

WHAT WE MUST PROVE

Three things must be proven: it works live, a chain pays $1,500 per location, and tracking keeps members.

WORKS LIVE

Test on real cameras.

CHAIN PAYS

Chain pilot, then paid LOI.

RETENTION

No evidence yet.

[TODO: success thresholds the founders will commit to (accuracy %, active-member share, pilot-to-paid conversion)]

Pilot design and paid-LOI trigger are plan, not benchmark (05_business_model.md §5; price 07_founder_input.md §8). Pilots measure retention (03_market.md §4.6). Legal review of member linking and consent comes before any privacy claim (02_problem_customer.md §7).
