spottr

Automatic workout tracking from existing gym cameras.

Felix Müller-Gliemann, Martin, Gard · Co-founders
info@tryspottr.app · tryspottr.app

[TODO: full names of Martin and Gard]

Every gym already
films every workout.
Not a single rep gets counted.

SPOTTR IN ONE LINE

Your gym's cameras, now your training log.

Spottr turns the cameras a gym already has into automatic workout tracking. Members get every set and rep logged without lifting a finger. Gyms finally see how their floor is used.

- Nothing to wear
- Nothing to type
- No new cameras

OPPORTUNITY

Fitness is at a record high, and people pay to track their training.

81M

US gym members in 2025, a record (+5.2%)

$1.1B

Whoop bookings run rate, +103% in 2025, 2.5M+ members

€1.02B

Technogym revenue 2025, +13%

Longevity made strength training mainstream. The tools to track it are still built for enthusiasts: wearables, apps, manual logs.

HFA US membership release (Apr 2026). Whoop Series G announcement (Mar 2026): $575M at $10.1B valuation; bookings figure is company-reported. Technogym FY2025 results (19 Mar 2026), IFRS.

PROBLEM · TWO SIDES, ONE BLIND SPOT

Members won't log their workouts. Gyms can't see their floor.

MEMBERS

Tracking is tedious.

- Nobody wants a notebook or notes app between sets
- Logging breaks the flow of every workout
- Wearables track strain, not sets and reps

GYMS

They're flying blind.

- No granular data on how the floor is used
- Zones, peak times, popular equipment: all guesswork
- Members drift away unseen: average retention is 66.4%

Retention: HFA 2025 Benchmarking (175 operators, data year 2024). Member-side points are founder observations, not a survey.

WHY NOW

Computer vision just became cheap enough to watch every set.

Vision at scale is newly affordable

Lightweight models like Gemini Flash label a set for a fraction of a cent (est. $0.001–0.005).

We're first to use it

The technology exists today, and the cost per capability keeps falling.

Longevity is exploding, but complicated

Spottr makes training data effortless: walk in, train, it's logged.

AI as a service, end to end

Fully autonomous. No user input, no gym staff, no setup per exercise.

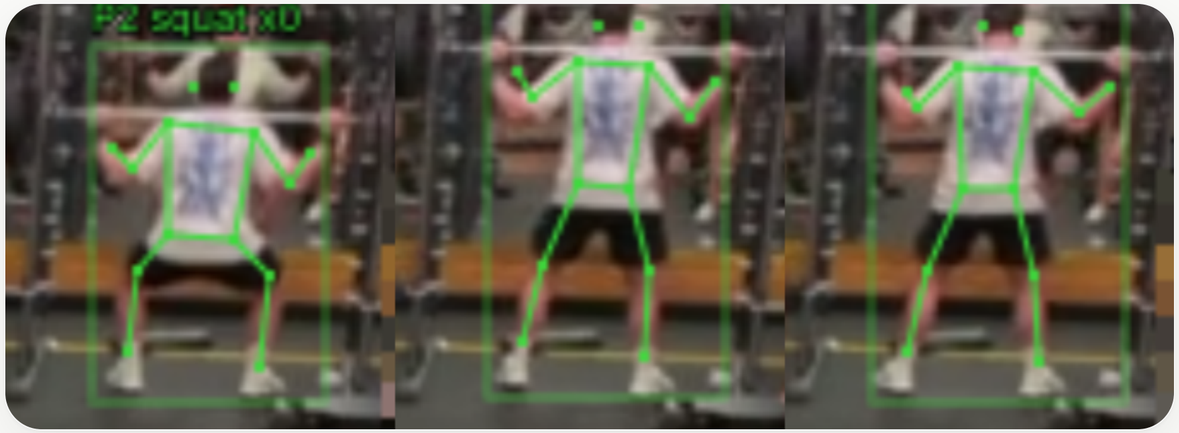

“In 10–15 years, this will be the norm in every gym.”

Per-set cost is our estimate from list prices (token counts not yet measured). Cost per fixed AI capability falls ~10x a year (a16z "LLMflation", language models); Gemini Flash list prices step up on 2027-01-01, so our own cost line is not guaranteed to fall.

SOLUTION · THE GYM PAYS, MEMBERS USE IT

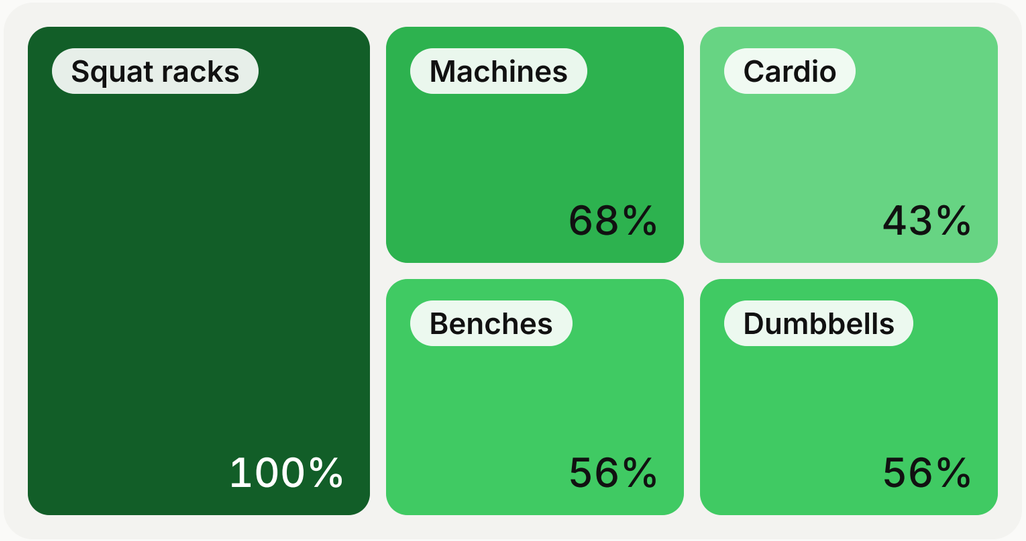

Members get every set logged. Gyms get their floor, hour by hour.

FOR MEMBERS: EVERY REP, COUNTED

Real pipeline output

FOR GYMS: FLOOR HEAT MAP

6pm — quiet — full

Demo data

Left: recorded squat clip, 5 reps counted, cropped to the lifter (consent confirmed). Right: Monday occupancy of the simulated demo gym (/gyms), animated 6am to close. Gym dashboards are simulated today.

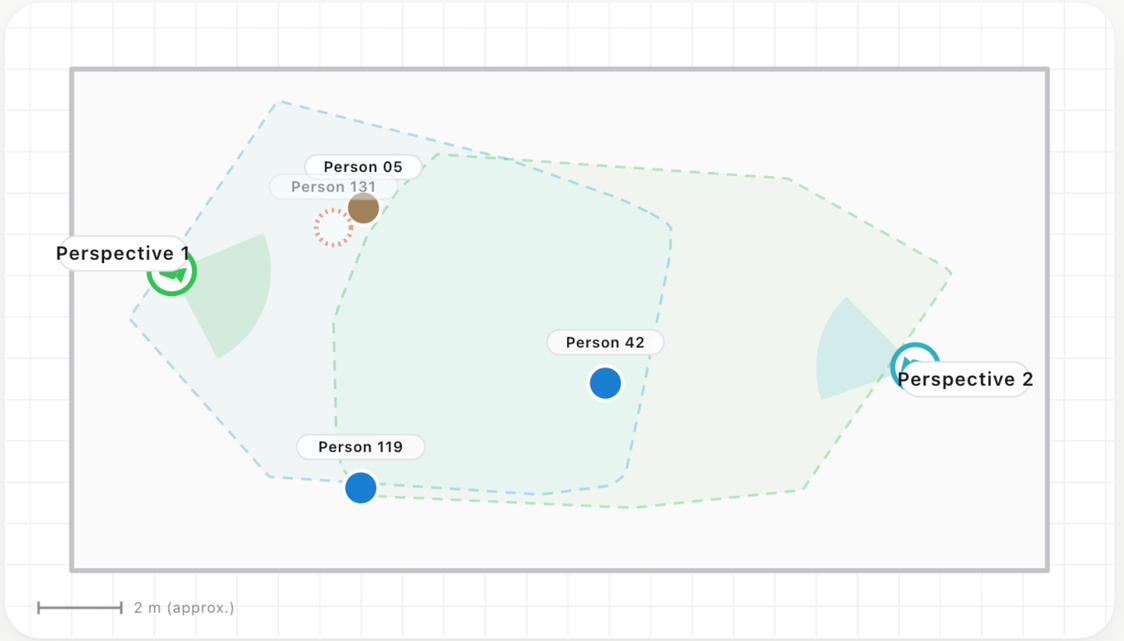

HOW IT WORKS · NO GYM IT PROJECT

Plug in one box. Use the cameras already on the walls.

1 **We plug in our box**
A small Spottr computer joins the gym's network. We install it.

2 **It connects to existing cameras**
No new cameras, no wiring, no work for the gym's IT.

3 **Data flows automatically**
Members see workouts in the app. The gym sees its dashboard.

Real output: two cameras, one floor map

Right: world-service output from two recorded cameras in one room, each person kept as one anonymous identity across both views. The edge box and live camera ingestion are in development; today's pipeline runs on recorded footage.

TRACTION

In our first week of outreach, a San Francisco gym chain signed on.

8 gyms onboarding from **November 1**, a 9th opening soon

START
Met at a Berkeley hackathon

BUILD
Built the product end to end

WEEK 1 OF OUTREACH
SF chain onboarding all locations

NOW
Outreach ongoing. Operators reach out to us to connect and help.

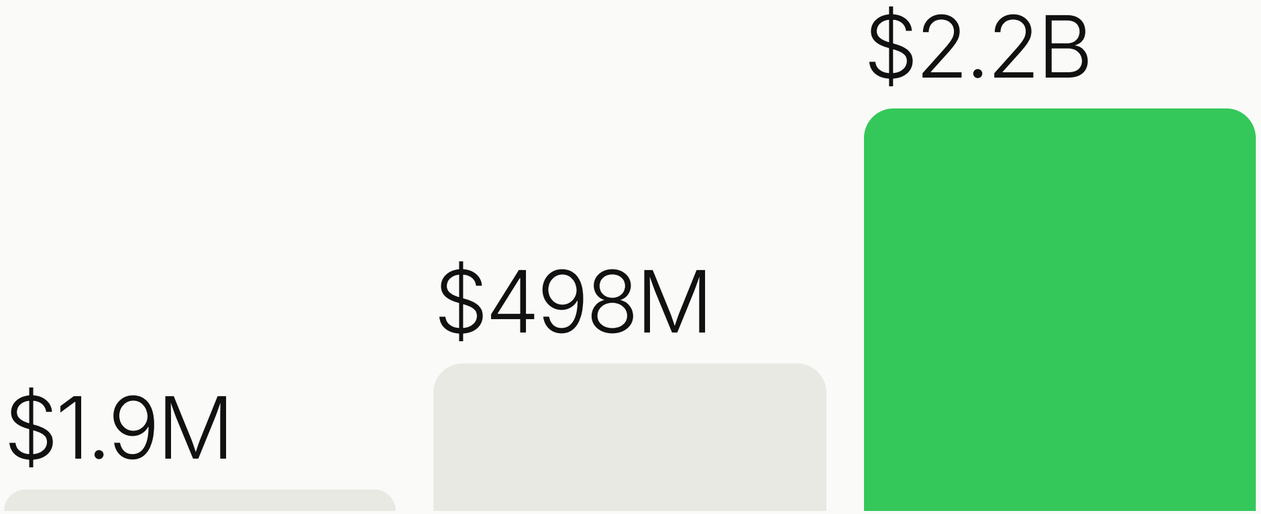

[TODO: chain name or logo, if the chain agrees]

[TODO: investor quote from Howard (partner, Series A–C fund), once Howard approves]

Founder-reported. Onboarding starts 1 Nov 2026 across the chain's 8 locations; the 9th is the chain's own expansion.

MARKET SIZE

A $2.2B market, even if only half of all gyms have cameras.

Bay Area
where our traction is: chains, camera-suitable

United States
55,281 clubs × 50% × $18K/yr

Global TAM
gyms worldwide × 50% × $18K/yr

$1,500 per location per month · only 50% of gyms assumed to have usable cameras

ADJACENT MARKETS

Whoop wearable, Series G, Mar 2026	$10.1B valuation
Technogym connected equipment, FY2025	€1.02B revenue
EGYM smart machines, Series G, Sep 2024	$1.2B+ valuation

[TODO: source the global gym count; $2.2B at 50% implies ~245K gyms worldwide]

US clubs: HFA. Bay Area: ~104 camera-suitable chain locations (v1 research, assumed). The 50% camera share is a deliberately conservative assumption, not measured. Bar heights not to scale. Derivation in appendix A3.

BUSINESS MODEL · TWO REVENUE STREAMS

Gyms subscribe per location. Members start free and upgrade.

GYMS · B2B SUBSCRIPTION

Fixed monthly fee per location, tiered by size

SMALL	MEDIUM	LARGE
<3K visits/mo	3–5K visits/mo	5K+ visits/mo
$TBD	$TBD	$TBD

Average target **~$1,500 per location per month**, hardware included.

MEMBERS · FREEMIUM

Free automatic logging, paid AI coaching

- **Free:** every set and rep, logged
- **Premium:** AI personal trainer built on your own workout history
- **Next:** PRs and social, leaderboards, rewards

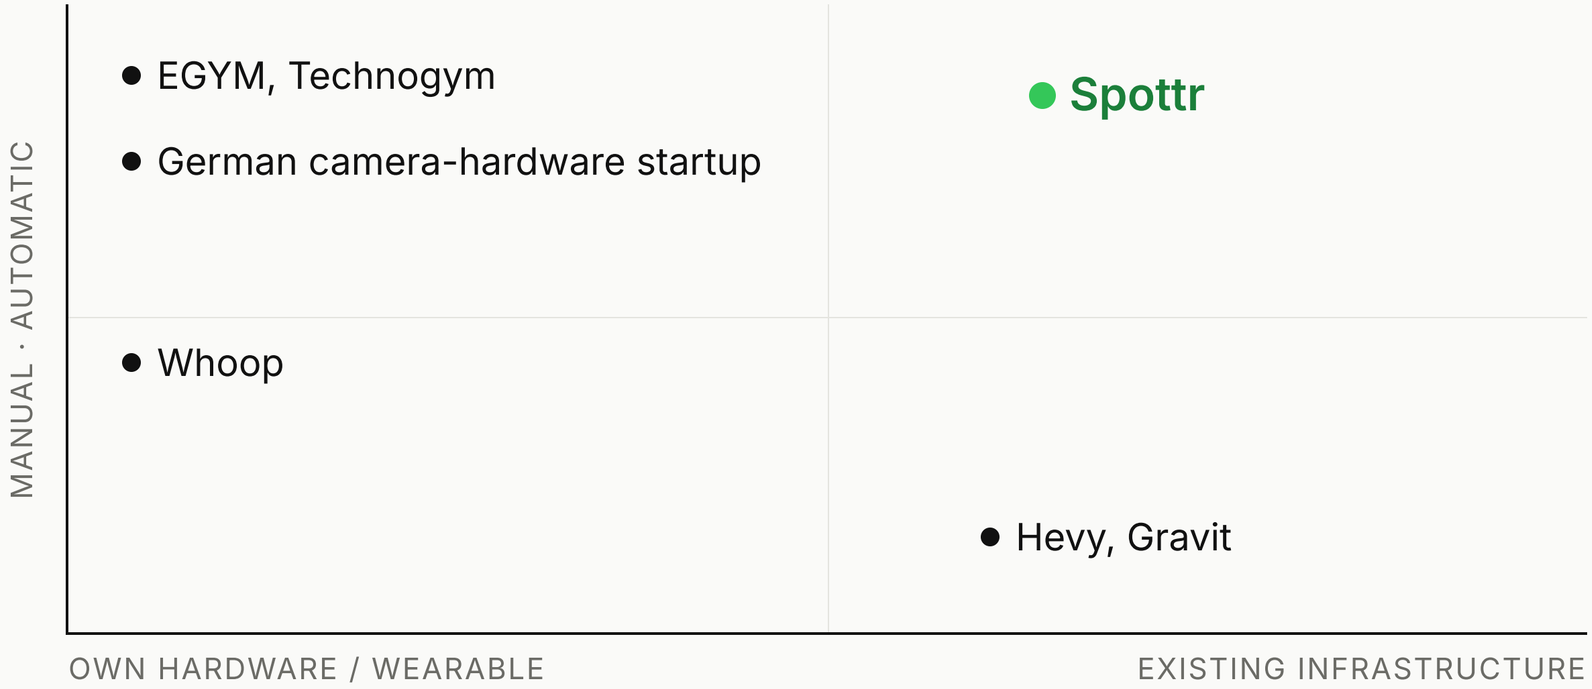

CAC ≈ $0 The gym is our member acquisition channel.

Defensible No one else holds this depth of personal exercise data.

Model sense-checked with a partner at a Series A–C fund. Tier boundaries and prices are placeholders until validated against gym size data; no customer has paid yet.

COMPETITION

Everyone else needs new hardware or manual input. We need neither.

MACHINE-BASED

EGYM, Technogym: tracking only on their own machines

WEARABLE

Whoop: on the wrist, a different market

MANUAL APPS

Hevy, Gravit: type every set by hand

DIRECT

One German startup, own camera hardware: hard to scale

[TODO: name the German competitor]

Positions are our reading, not measured. Details in appendix A4.

TEAM

Three full-time co-founders from Berkeley: business, venture building and robotics.

[TODO: real group photo of the team, not separate LinkedIn headshots]

Felix Müller-Gliemann

CO-FOUNDER

Business, LMU Munich and Berkeley. Previously Founders Associate at an AI-native M&A startup.

Martin

CO-FOUNDER

MSc Entrepreneurship

Gard

CO-FOUNDER

MSc Robotics

[TODO: full names; final titles (CEO/CTO/CPO) once aligned with Gal; add Gal if Gal joins]

THE ASK

What we need from [Program] to go from one chain to the US.

Connections

Intros to gym chains and operators beyond the Bay Area.

Resources

Compute credits, hardware for new sites, privacy and legal counsel.

Network

Investors for our pre-seed and founders who scaled B2B2C.

Raising a $300k pre-seed

[TODO: tailor all three columns to exactly what this program offers]

spottr

Automatic workout tracking from existing gym cameras.

APPENDIX

Appendix

A1 Privacy and data security

A2 Technology and architecture

A3 Market size derivation

A4 Competitor landscape

A5 Go-to-market

A6 Roadmap and open questions

A7 Product gallery

A1 · PRIVACY AND DATA SECURITY

We track body pose, not faces. Here is what the build does today.

AVAILABLE TODAY

Today **No face recognition.** Sets and reps come from body keypoints over time.

Today **Bystanders pixelated** head to toe in the member replay.

Today **Blurred snapshots only:** Gemini gets one small image per set, lifter's face pixelated, others fully pixelated.

Today **Operators see aggregates:** counts, trends, zones; no photos or video.

Today **AI recaps from text** (exercise names, reps), not video.

IN DEVELOPMENT

Building All processing on the Spottr box; goal: raw video never leaves the gym

Building Member opt-in and opt-out

Building Retention windows with automatic deletion

Building Self-serve export and deletion

KNOWN LIMITS

Blur only covers people the pose model detects; the replay blurs while drawing, the file itself is not blurred.

`[TODO: GDPR / CCPA framework and consent flow, after legal review]`

Mirrors the /gyms/privacy page ("Available today" vs "In development"), which only lists what the current build does.

A2 · TECHNOLOGY AND ARCHITECTURE

From camera stream to logged set, with no per-exercise rules.

Existing cameras
Gym IP cameras; recorded footage today

→

Pose + tracking
YOLO26 pose, BoT-SORT person tracks
Built

→

Rep counting
From joint motion; the label never changes the count
Built

→

Exercise label
One blurred snapshot per set to Gemini Flash
Built

→

Shared floor map
Multi-camera calibration, sync, one ID per person
Built

RUNS ON

Python vision pipeline · FastAPI world service · React/TypeScript member app and gym dashboard

TARGET DEPLOYMENT

On-site edge box (Mac mini class) per gym; only blurred snapshots and workout data leave the building In development

Tested on recorded clips: 5 squats and 10 dips counted, 0 false sets on a crowd clip, 13–14 fps (team-stated, 3 clips; not a benchmark).

A3 · MARKET SIZE DERIVATION

Locations × camera share × price, with conservative inputs.

LAYER	LOCATIONS	WITH CAMERAS	PRICE / YR	SIZE	SOURCE
Bay Area	~208 chain locations (implied)	~104 (50%)	$18,000	$1.9M	v1 research, vendor counts (assumed)
US chains (SAM)	7,825	~3,900 (50%)	$18,000	$70M	vendor counts, ±5%
US, all clubs	55,281	~27,600 (50%)	$18,000	$498M	HFA
Global (TAM)	~245K implied	~122K (50%)	$18,000	$2.2B	to source

CAMERA SHARE

50% is assumed, not measured. 30–70% moves US chain SAM to $42–99M. Open share of gyms with IP cameras on the weight floor.

VISION COST PER SET

~$0.001–0.005 per Gemini Flash call (estimate from list prices); token counts not yet measured.

Price: $1,500 per location per month (founder target, untested). v1 also reported US + Europe (122,796 clubs) at $2.2B without a camera haircut; keep one definition per deck.

A4 · COMPETITOR LANDSCAPE

Manual vs automatic, own hardware vs existing infrastructure.

PLAYER	WHAT IT IS	TRACKING	HARDWARE	WHY WE'RE DIFFERENT
EGYM	Smart strength machines, corporate wellness	Automatic, own machines only	Proprietary	Covers the whole floor, incl. free weights
Technogym	Connected equipment	Automatic, own machines only	Proprietary	No equipment replacement
Whoop	Wrist wearable	Mostly automatic, strain-based	Wearable	Nothing to wear; sets and reps
Hevy, Gravit	Workout logging apps	Manual	Phone	Zero input
German startup	Camera-based tracking	Automatic	Own cameras	No install of new cameras
Spottr	Gym cameras to workout log	Automatic	Existing cameras + one box	

Our reading of public product information. Incumbents could add camera tracking; our edge is the existing-camera install and the member data it builds up.

A5 · GO-TO-MARKET

Chains first, Bay Area first, then the US, then global.

NOW

SF chain, 8 locations

Onboarding from 1 Nov; prove it live

NEXT

Bay Area chains

Referrals and case study from chain #1

THEN

US chains

One contract, many locations

LATER

Global

Same box, same cameras

GYM CHANNEL

Direct founder outreach to chain operators; inbound from operators who heard about us.

MEMBER CHANNEL

Every partner gym brings its members in free. Premium converts from there.

[TODO: sales cycle length, pilot-to-paid terms, onboarding playbook per location]

A6 · ROADMAP AND OPEN QUESTIONS

Next: link people to members, then make training social.

OPEN: WHO IS WHO

Linking a person on camera to a member account. Options:

Option QR code check-in at the door

Option Refit ID

Option Face recognition at entry and exit points **(needs legal review; today we do no face recognition)**

MEMBER FEATURES

AI personal trainer on your own workout history (premium)

PRs and social: share lifts, follow friends

Leaderboards per gym and exercise

Rewards: a free premium month for top lifters

Matching: find a training partner at your gym

GYM FEATURES

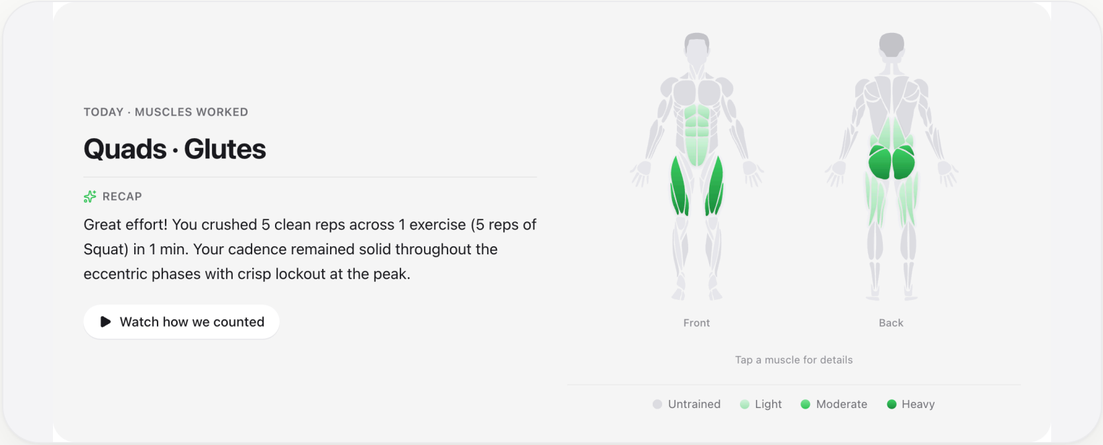

Live floor heat map, 6am to midnight

Equipment popularity and idle machines

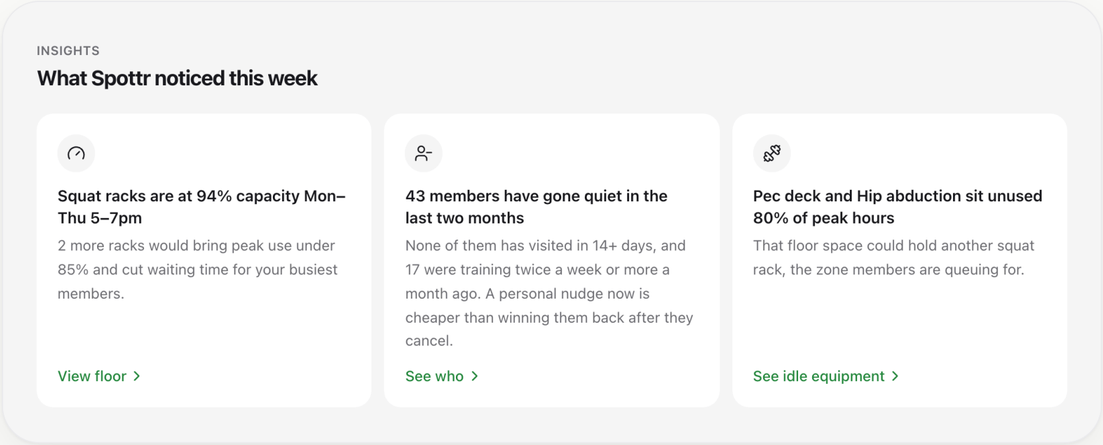

Churn signals: members going quiet

Roadmap, not commitments. The identity-linking choice decides what goes on the privacy page; locker-room cameras were raised as an option and need legal review before any use.

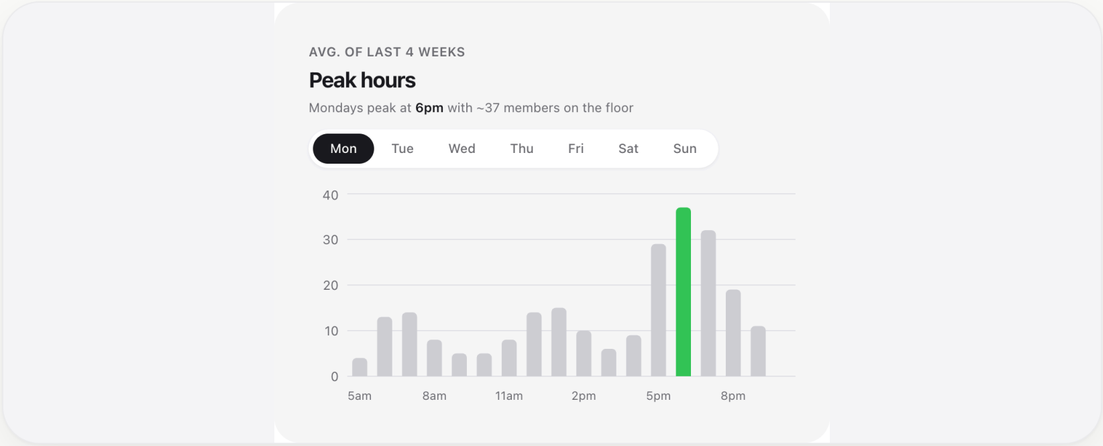

A7 · PRODUCT GALLERY

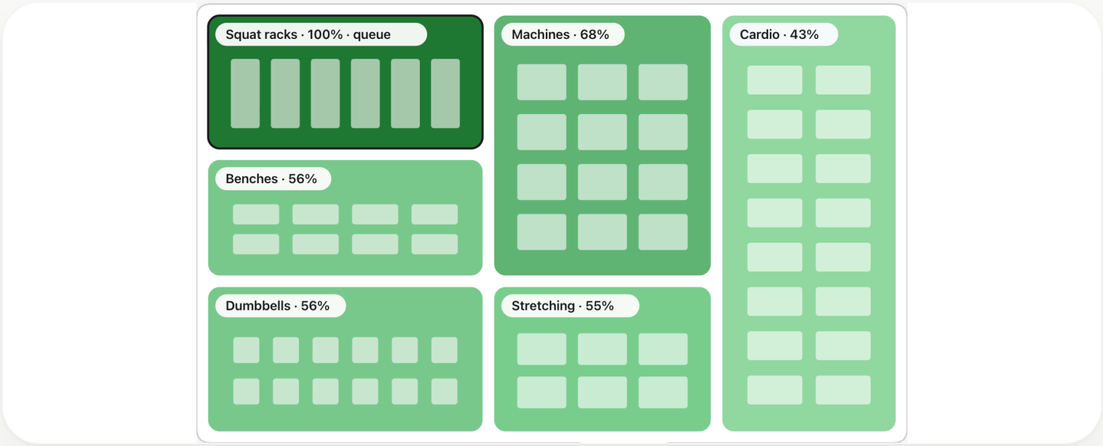

Member app · demo data

Gym insights · demo data

Peak hours · demo data

Zone overview · demo data

Live demo: tryspottr.app/demo (members) and tryspottr.app/gyms (operators).
