

spottr,

Spottr turns the cameras a gym already has into an automatic workout log.

Automatic workout tracking from existing gym cameras.

Pre-seed, 2026

[TODO: presenter names, contact email, and which submission this is (YC W27 application vs a16z pitch)]

PROBLEM

Gyms lose about a third of their members every year, and engaged members stay far longer.

66.4%

average annual retention

23 vs 16

months: engaged vs other members

2.1 → 1.5

weekly visits per member, 2019 to 2024

[TODO: one real quote or objection from a gym owner we spoke to]

WHY NOW

Strength training is booming, gyms are healthy, and AI labelling now costs a fraction of a cent per set.

81M

US members, 2025

Free weights: fastest-growing	Revenue +10.7%, EBITDA 22.1%	AI label: ~\$0.001-0.005 per set (est.)
-------------------------------	------------------------------	---

[TODO: share of mid-tier gyms with IP cameras covering the weight floor and RTSP access, add only after first site visits]

Sources: HFA Global Report 2026; 03_market.md. Free weights fastest-growing category since 2021; revenue and EBITDA are medians (2025). AI cost is an estimate, token counts not yet measured. Per-set cost is the range from Gemini 3.1 Flash-Lite to 3.6-3.8 Flash (2027) prices.

SOLUTION · THE GYM PAYS, MEMBERS USE IT

Spottr is built to log every set from a gym's existing cameras, with nothing for members to wear or type.

FOR MEMBERS

RSF Weight Room

Welcome back, Felix

Your session was logged automatically by the gym cameras.

TODAY · MUSCLES WORKED

Quads · Glutes

RECAP

Great effort! You crushed 5 clean reps across 1 exercise (5 reps of Squat) in 1 min. Your cadence remained solid throughout the eccentric phases with crisp lockout at the peak.

[TODO: how a person on camera is linked to a member account (check-in, app QR, re-ID), unresolved]

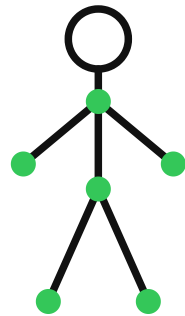

context.md §What Spottr is; 01_product.md §7. Gym dashboard is simulated today.

HOW IT WORKS

Pose tracking counts reps without a rule per exercise, and the cloud sees one blurred image per set.

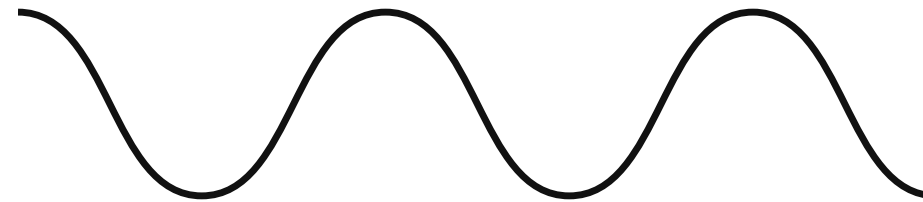

1

Pose and tracking

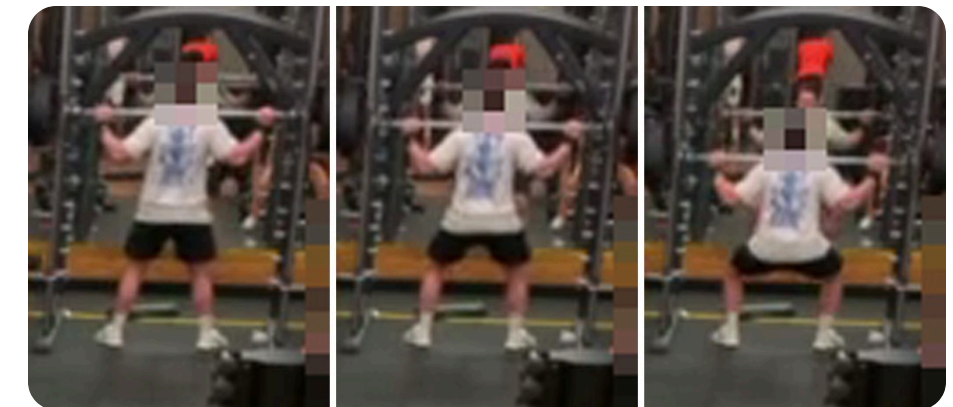

2

Rep counting

3

Exercise labelled from one blurred snapshot

Real pipeline output

Today: bystanders pixelated, faces blurred. Target: on-site Mac mini, not deployed.

Step 2 counts reps from joint motion (Gemini names the exercise, the label never changes the count). Cloud processing today; on-site processing is the target. 01_product.md §2-§4; privacy status as on the in-app Privacy page (available today / in development).

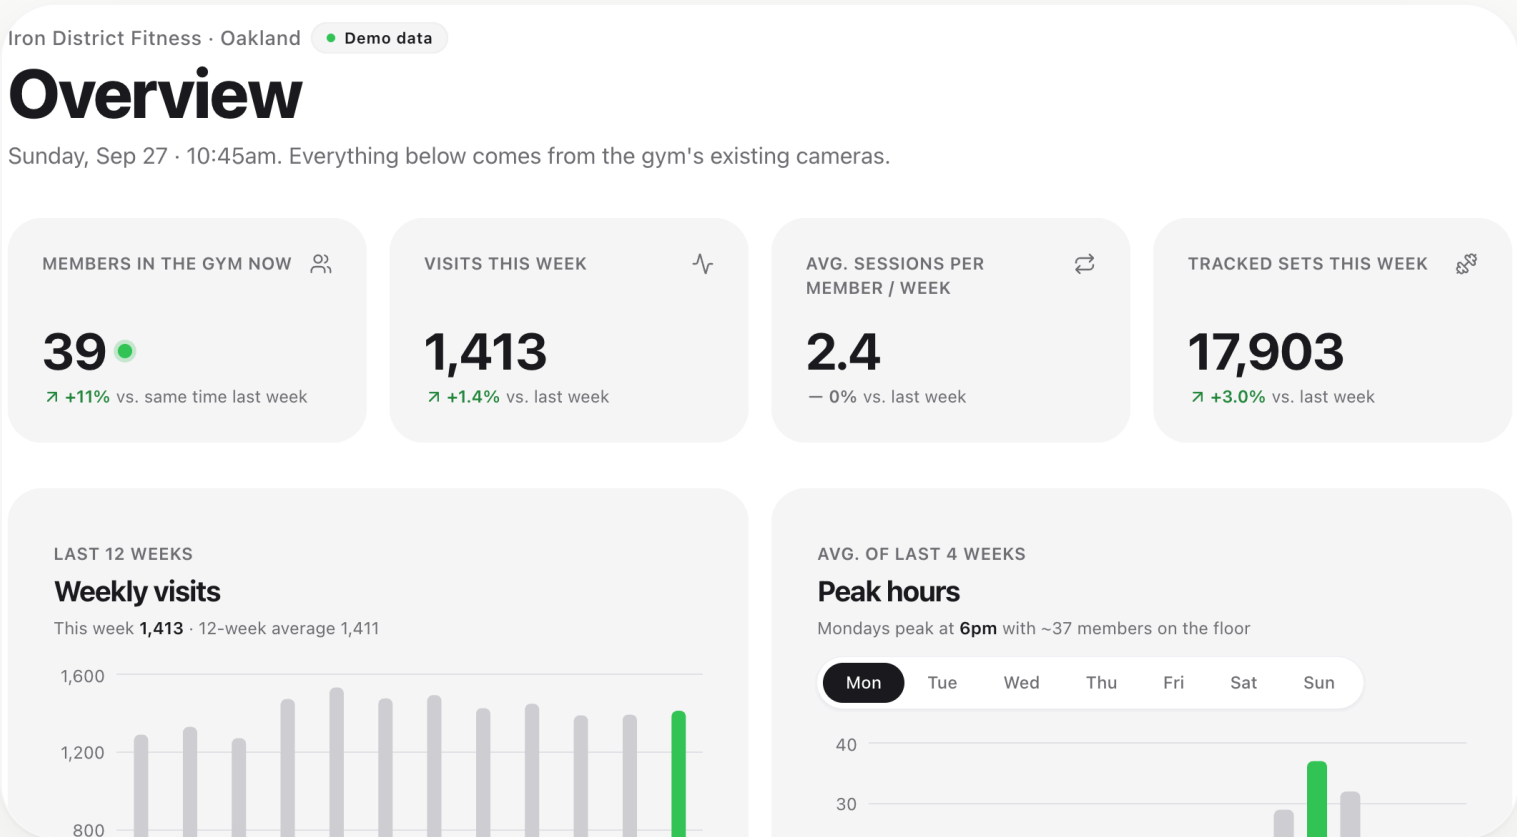

PRODUCT

The replay already shows real pipeline output: skeleton overlay, rep counter and pixelated bystanders.

Real: replay of recorded clips (squat x5, dips x10)

Real pipeline output, lifter's face pixelated for this deck

Simulated: operator dashboard and most member tabs

Demo data

[TODO: confirm the lifters in squat.mp4 and dip.mp4 are team members or have consented before showing replay frames]

WHERE WE ARE

We built a working technical core in days; it has run on recorded clips and a test suite, not yet on a live gym camera.

BUILT

3-hour hackathon sprint
17 of 17 tests pass
5 squats, 10 dips counted
Outreach started

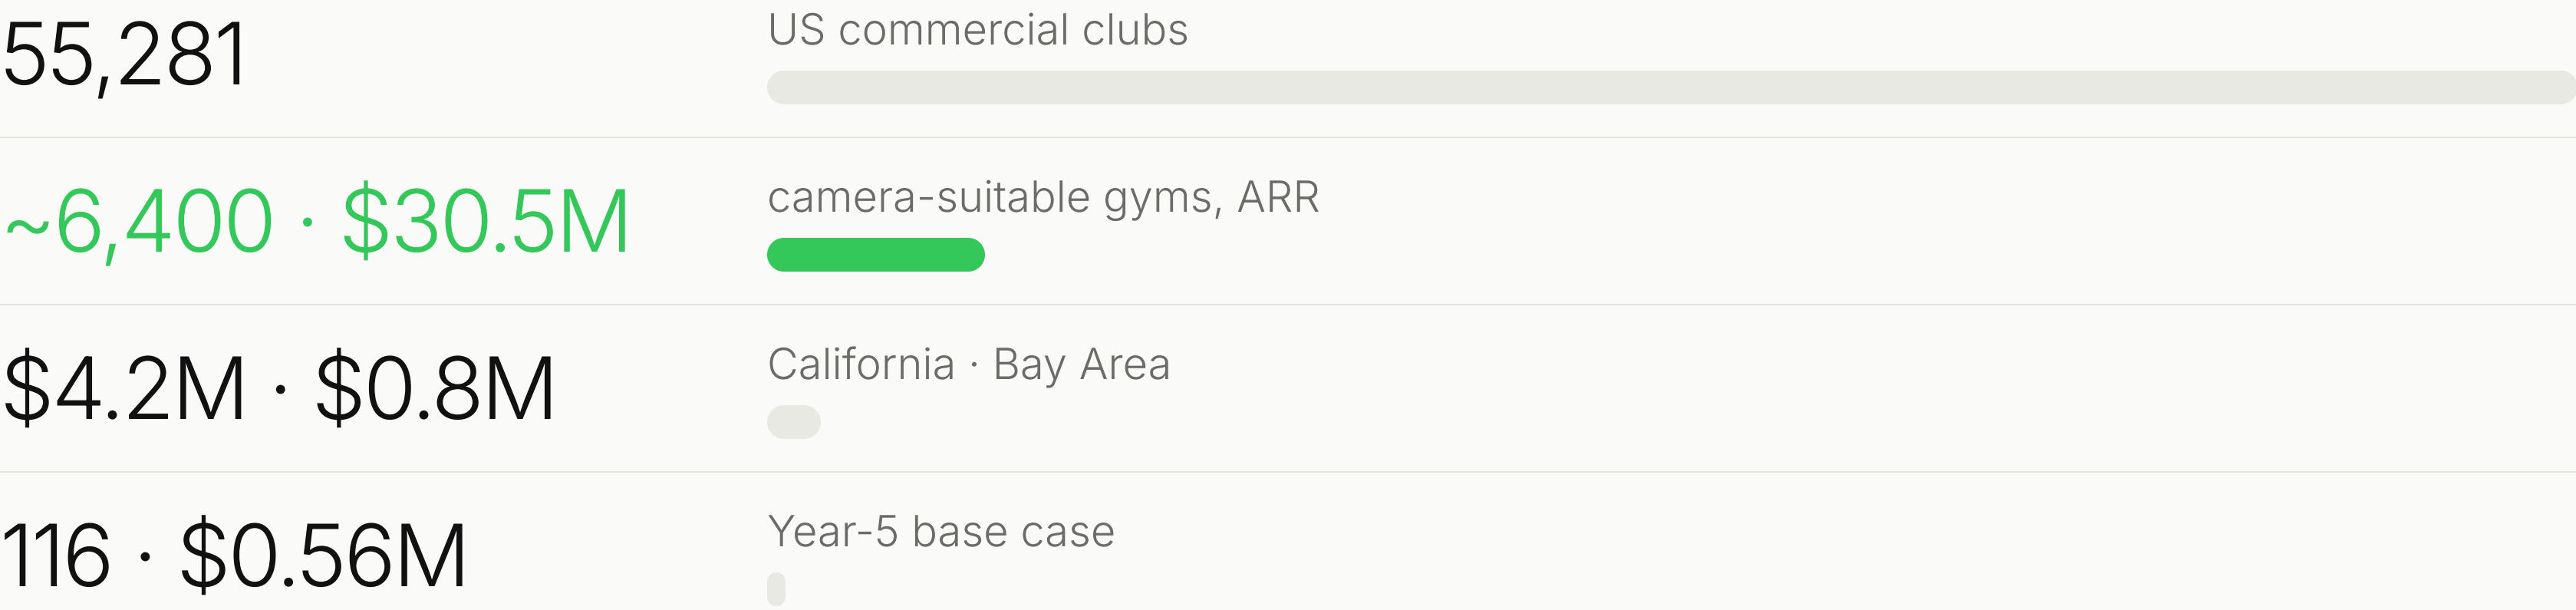

NOT YET

Live cameras, pilots, LOIs, revenue.

- [TODO: number of gyms contacted, replies, and any camera setup seen]
- [TODO: named VCs or ex-YC founders who gave positive feedback, only with their permission]

MARKET

Our first wedge is about 6,400 US gyms, roughly \$30M a year, before any expansion.

Estimate

[TODO: venture-scale story beyond mid-tier gyms (chains, B2C freemium, other segments, equipment-utilisation data, international), not sized in the research; founders to choose]

BUSINESS MODEL

Gyms pay \$299-499 a month per location with hardware included, which keeps a 44.6% gross margin in our central case.

$$\text{\$399} - \text{\$221} = \text{\$178} \text{ a month}$$

44.6% gross margin, one box per gym

Break-even: keep 5.8-9.3 members a year

Hardware \$1,489, carried by Spottr

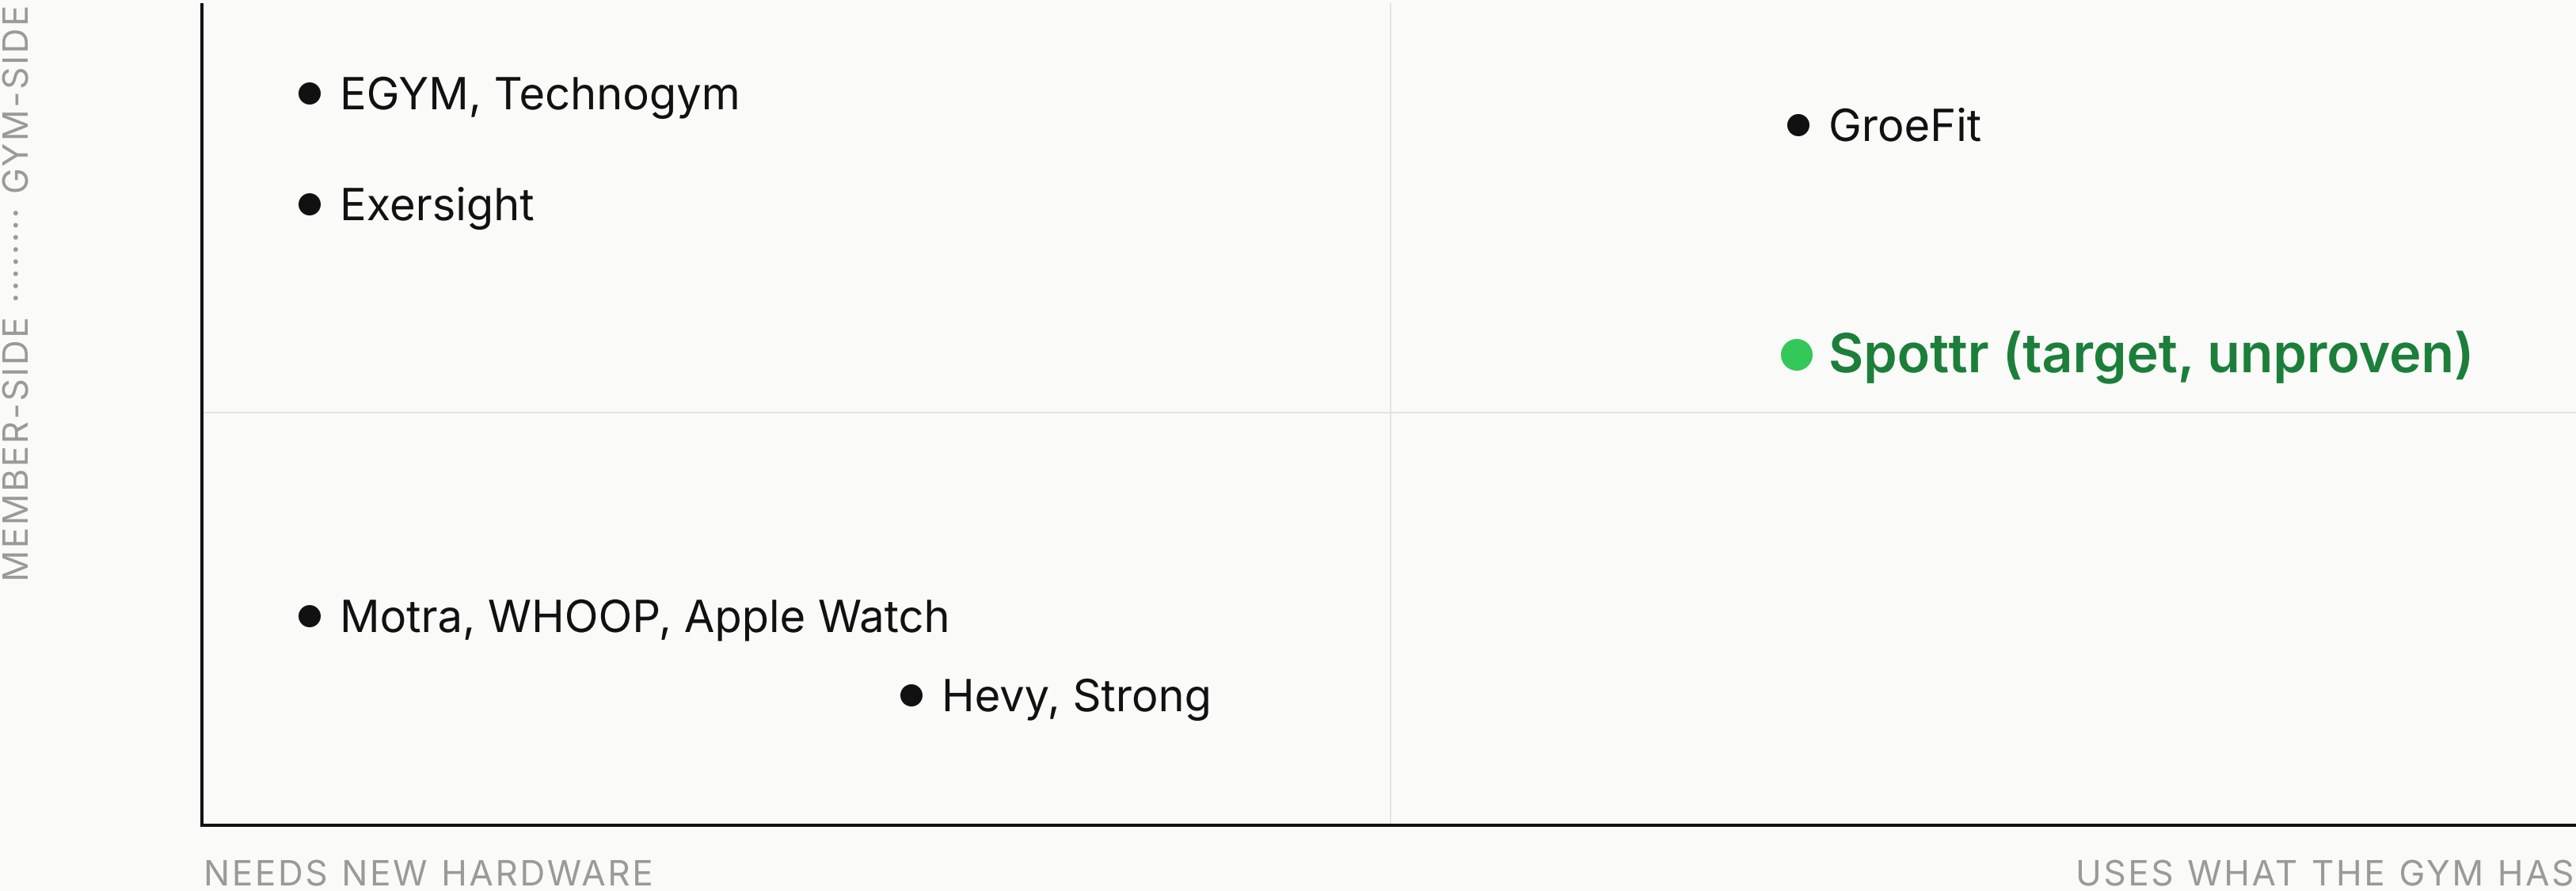

Illustrative; no customer has paid. Two boxes per gym: ~37%.

[TODO: confirm pricing model with founders (per-location tiers \$299/\$499, hardware included, 60-day pilot to LOI)]

Assumes a 400-member gym and Gemini Flash at the 2027 price. 05_business_model.md §2.4, §3, §4.2 (central case: Flash 2027 price, 1 box; two boxes 37.4%). Retention effect unproven.

COMPETITION

Incumbents auto-log only on their own machines, and members auto-log only by wearing something.

TEAM

Three founders, all full-time, with business, entrepreneurship and robotics backgrounds.

Felix Müller-Gliemann
BSc Business Administration (LMU Munich), exchange at UC Berkeley (Haas). Ex-Founders Associate, AI startup.

Frontend, sales, fundraising.

Martin
MSc Entrepreneurship.

[TODO: Martin's role and title, full name]

Gard
MSc Robotics. Works on the vision pipeline per the team.

[TODO: Gard's role, what he has built, full name]

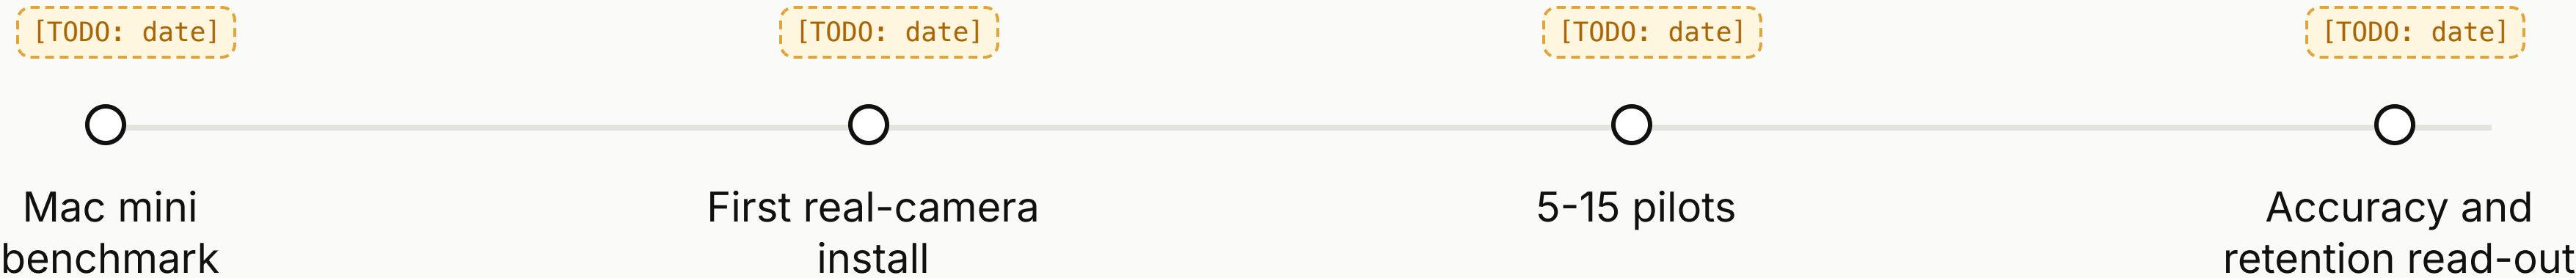

[TODO: CEO / CTO titles] [TODO: US work/visa status for full-time work] [TODO: incorporation plan and timing, not yet incorporated]

[TODO: advisors or references willing to be named] [TODO: photos]

THE ASK

We are raising **\$300k** so three founders can work full-time in the US and take Spottr onto real gym cameras.

Use of funds: runway, hardware, pilots, product.

Next: seed round after pilots.

[TODO: instrument and cap (SAFE? post-money cap?)] [TODO: how \$300k relates to YC's \$500k / the a16z program] [TODO: use-of-funds percentages] [TODO: incorporation timing]

Timeline within 12 months. Hardware for 5-15 pilots about \$7k-36k (estimate). Hardware: 5 x \$1,489 to 15 x \$2,388 (05_business_model.md §2.4); 5-15 pilots is an assumption (03_market.md §3.4).

WHAT WE MUST PROVE

Three things stand between us and a business: it must work live, gyms must pay, and tracking must keep members.

WORKS LIVE

First test and benchmark on real gym cameras.

GYMS PAY

60-day pilot converting to a paid LOI.

RETENTION

No evidence yet; pilots measure it.

[TODO: success thresholds the founders will commit to (accuracy %, active-member share, pilot-to-paid conversion)]
